Dear Sir

RE: BULK FUEL STORAGE FACILITIES

The *Environmental Protection Act 1994* requires landowners to inform the Environmental Protection Agency of any known "notifiable activity" on their property. The Schedule of "notifiable activities" includes the storage of petroleum product or oil. This is defined as storing petroleum product or oil:

- in underground tanks with more than 200l capacity; or
- in aboveground tanks with:
 - for petroleum products or oil in class 3 in packaging groups 1 and 2 of the dangerous goods code - more than 2,500l capacity; or
 - for petroleum products or oil in class 3 in packaging groups 3 of the dangerous goods code - more than 5,000l capacity; or
 - for petroleum products that are combustible liquids in class C1 or C2 in Australian Standard AS1940, "The storage and handling of flammable and combustible liquids" published by Standards Australia - more than 25,000l capacity.

In compliance with the Act, the Queensland Police Service has recently completed a survey of police establishments to identify where bulk fuel storage facilities exist. A copy of the survey is attached. You will note that a number of facilities have already been decommissioned and that others have been identified for future decommissioning. It is unknown whether the decommissioned facilities were remediated, however, this will occur as part of any future decommissioning.
