Submission of statistical data

Coal production and sales

COAL PRODUCTION AND SALES REPORTING SUBMISSION TEMPLATES

VERSION 1.0

RELEASE: March 2022

INTRODUCTION

The templates within this workbook have been developed to standardise data for submission as per Practice Direction 3 Submission of statistical data relating to coal production and sales (the Practice Direction). The Practice Direction provides additional information on the mandatory requirements for coal statistical reports. It also details specifications on how data should be lodged, including acceptable file formats and data standards.

The template workbook in XLSX format is the preferred mode of submission. However, XLSX, XLS, Comma-delimited ASCII, or CSV files exported from enterprise databases may be used for data submission. Submissions made using database exports must meet the following criteria:

- all data field headers (column names) must match those contained within this workbook
- all files must be named as per the below (8b) convention and the componentID must match the sheet names contained within this workbook
- all mandatory fields specified in this workbook must be complete
- all values must adhere to specified value ranges, data types, and any applicable controlled list for the field as per the lists found in the VALIDATION_DICTIONARY
- all matches detailed above must be exact, i.e. verbatim.
- if submitting in an excel workbook format do not alter the header metadata structure or sheet names
- if submitting in csv format remove all header data between the column names and the submitted data.

INSTRUCTIONS

1. Review the Practice Direction (Submission of statistical data relating to coal and mineral production and sales) for information on the required information for a statistical return.
2. For each submission template, the fields are defined as follows
 - a. **Mandatory (Y)** is data that must be provided in all cases
 - b. **Mandatory Where Applicable (Y*)** is data that must be provided where data is available and applicable.
 - c. **Where Available ()** is data that should be provided where available for completeness of the dataset
3. Delete any example data prior to populating templates with data for submission.
4. A definition has been provided for each field to facilitate the matching of data as recorded by industry, to its respective standardised field within the submission template.
5. The TEMPLATE DEFINITIONS section below provides information on the structure of the templates. The structure includes the fields, data type and length and, where relevant, the standard unit of measure/format and the decimal place accuracy.
6. In order to apply consistent terminology, several fields utilise a validation dictionary. Details are provided in the VALIDATION_DICTIONARY tab of the submission template workbook. These have been implemented as restricted entry.

Restricted entry – A list of acceptable values are provided for these fields. Where a field is defined by a controlled list the value entered must match a listed term. Any other values will generate an “INVALID ENTRY” error.
7. For further clarity, some code lists are supplemented by vocabularies including definitions for each term that are hosted at <https://vocabs.gsq.digital/vocabulary/>
8. The data file components may be submitted as a combined workbook (*.XLSX) or as separate text-readable (*.CSV files) in comma-delimited format. The column structure of the tables and column names must not be modified. Please submit using the relevant naming conventions as follows:
 - a. **Combined Workbook** - “[MINE_NAME]_quarterly-coal-return-form_Q[1-4]-[YYYY]”.
For example, “Big_Mine_quarterly-coal-return-form_Q2-2020.xlsx”
 - b. **ASCII files** - “[MINE_NAME]_quarterly-coal-return-form_Q[1-4]-[YYYY]_ComponentID”.
For example, “Big_Mine_quarterly-coal-return-form_Q2-2020_SALES.csv”.

All details about lodging statutory reports and notices are available on the Business Queensland website at www.business.qld.gov.au/industries/mining-energy-water/resources/applications-compliance/lodging-statutory-reports. Representatives from the Geological Survey of Queensland are also available to assist. Visit <http://www.resources.qld.gov.au/?contact=gsq>.

TEMPLATE REFERENCE

SUBMISSION TEMPLATE	PURPOSE	REQUIREMENT
MINE_DETAILS	Data for the mine and reporting period. One submission is required for each mining project for each quarter.	MANDATORY
TENEMENT_STATUS	Data for the tenement(s) that form the mine and their activity status during the reporting period.	MANDATORY
RAW_COAL_MINED_TRANSFERRED	Site production from the mine and raw material transferred in from other mines for processing on site, or transferred out for processing at another mine.	MANDATORY
PROCESSED_PRODUCTS	Details of the processed coal products generated from the mine through the processing plant. The coal crushed and washed on-site for sale, and the coal processed on-site that does not require washing to be saleable.	MANDATORY WHERE APPLICABLE
PRODUCTS_TRANSFERRED	Data for any processed saleable products sent to or received from other mines. Any transaction where the reporting mine is not selling the product, i.e. Internal transfers of saleable products to and from the mine, and stock purchased from other domestic mines.	MANDATORY WHERE APPLICABLE
SALEABLE_STOCKPILE	Data for the stock-on-hand quantities of saleable coal produced held by the mine at the end of each month within the reporting period.	MANDATORY WHERE APPLICABLE

SALES	Transactions (coal sales) contracted, completed or cancelled during the reporting period. All sales must be reported as per their status at the time of period end, i.e. a previously provisional sale must have progress to completed (through completion or variation) or cancelled in a future period.	MANDATORY WHERE APPLICABLE
-------	---	----------------------------

TEMPLATE DEFINITIONS

TEMPLATE HEADER ELEMENTS	
FIELD	The standard field name that the column of data is reported against. Field names must be retained for all submissions including those lodged in csv format.
MANDATORY	Identifies that the column of data relates to a mandatory or minimum requirement as detailed in "Practice Direction 3 Submission of statistical data relating to coal and mineral production and sales". Y = Mandatory Y* = Mandatory where applicable.
DATA TYPE	Describes the type of data required to be reported in the field as VARCHAR2 (i.e. text), NUMBER, DATE, or TIME.
DATA LENGTH	Provides the length of characters or significant figures available for the column of data reported in the field with respect to the data type.
STANDARD UOM/FORMAT	Where relevant, provides the standard reporting Unit of Measure (UOM) required for the column of data reported in the field.
STANDARD DECIMAL ACCURACY	Where relevant, provides the standard decimal place accuracy required for the numeric values reported in the field.
DEFINITION	Provides a definition and explanation of the data required in the column. This may be used to alias column names from company systems to the standardised field name used in the submission template.

RAW_COAL_MINED_TRANSFERRED

Details of the Run-of-Mine production. The gross amount of coal extracted, the amount of overburden removed to access the coal, and any raw coal that goes in or out of the mine prior to processing.

PRODUCTS_PROCESSED

Details of processing (crush and wash with their discard volume) done on-site and the resultant washed and unwashed & bypass saleable coal, broken down by broad type, i.e. thermal, PCI, coking.

PRODUCTS_TRANSFERRED

Details of any saleable coal that goes in or out of the mine other than a sale by the reporting mine (e.g. internal company transfers or purchases) broken down by broad type, i.e. thermal, PCI, coking. Any saleable product that changes ownership from or to the mine.

SALEABLE_STOCKPILE

Details the saleable stock-on-hand that is owned by the mine at the close of each month broken down by broad type, i.e. thermal, PCI, coking. The coal available for sale.

SALES

Details of sales made by the reporting mine. The tonnage, specific coal type, price, and buyer details. If sold to a third-party contractor for on-sale, the mine only reports the sale it participates in. If blended with coal from other mines and a third-party sells on behalf of the reporting mine, report the tonnage of the sale contributed by the reporting mine and the value of that portion of the total sale or shipment.
