

QPWS K'gari Wongari Necropsy Checklist

Dingo id: 02Green18M

Date and location of death: Eastern Beach, 1.3km south Dundubara, K'gari. 25 Oct 2020

Necropsy performed by: p4(6) Personal inform assisted by 7026466, 7028020, 1435908, BAC rangers.

Date of Necropsy: 27 October 2020 Time of Necropsy: 16:31

DNA and carcass burial: Buried on country. Ear DNA

Probable cause of death: **Intraspecific fighting - dingo attack**

External

Description:-Sex:- Male ☒ Female ☐

Age Class:- ☐Pup ☐Juv ☐Sub adult ☒Adult ☐Old Adult

Approx age: Estimated older 3-4yo

Colour: Tan **Tail Tip:** Nil **Build:** Solid

Socks: RFF LowLFF Low **Scars:** Nil obvious **Condition:** 4/5 Ideal

Measurement: - Head Length 255mm Ear Length 128mm Shoulder Height 502mm

Tail Length 274mm (to skin tip) Body Length 673mm Neck Width 394*mm Weight 18.5kg

Carcass State: - Fresh ☐ Defrosted ☒ Decomposed ☐

Ectoparasites: Nil **External Injuries:** Large grazes (fresh) ventral neck region, large puncture wound from dingo, dorsal LH shoulder. Thinning of coat around lower flank regions.

Mouth/Throat: Clear

Teeth: (Worn, broken or missing): Moderately worn and stained. Missing R upper incisor, R lower canine cracked in half, missing half upper L canine.

Broken Bones: (Internal and external): Nil

Internal

Blood under skin Yes ☒ No ☐ location: Extensive, mainly under puncture marks

Fat under skin Yes ☒ No ☐ location and thickness: 2mm abdominal

Body cavity – Blood ☐ Air ☐ Other: Nil in abdominal area

Heart – fat coverage and thickness: 80% 4mm Blood inside ☒ Parasites ☒ Type? Moderate heartworm

Blood vessels: Unremarkable **Pericardium:** Unremarkable

Trachea/Bronchus: Unremarkable **Lung** - Colour: Pink Condition: Diffuse emphysema and pulmonary haemorrhage.

Stomach – Full ☒ Part Full ☐ Empty ☐ 100% Contents: Large pieces of fish frame (30%), sand/vegetation/slurry(45%), whole small mammal to be identified (15%), pieces of chopped cooked vegetables-pumpkin or sweet pot(5%), human sources meat&fat pieces (5%)

Small intestine – contents:

Parasites inside:

Large intestine – contents:

Heartworm test: Not required

Faecal sample: Taken - to be analysed

Pathology samples: Not taken

Omentum fat Abundant

Liver: Unremarkable-sharp edges

Gall Bladder: Half full

Perirenal fat score: Abundant

Kidneys - colour: Dark purple Fat coverage & thickness: 40% 4mm

Comment: Unremarkable

Pancreas – Unremarkable

Spleen: Unremarkable

Other Comments: Severe maceration of RHS neck muscles down to vertebrae with associated extensive haemorrhage expanding ventrally and lower lumbar region.

* Neck size larger due to swelling and injury.

Age definitions: Pup: 1-4 mths, Juv: 4mths-1yo, Sub adult: 1-2 yo Adult: 2-5yrs Old Adult: 5yo+

QPWS K'gari Wongari Necropsy Checklist

Dingo id: Blue17F

Date and location of death: Western beachfront between KBRV & McKenzie's jetty, K'gari. 14 Oct 2020

Necropsy performed by: ip4(6) Personal information assisted by 7026466, 7028020, 1435908, 1423683 & BAC staff.

Date of Necropsy: 27 October 2020 Time of Necropsy: 11:00

DNA and carcass burial: Buried on her country. Ear DNA

Probable cause of death: **Congestive heart failure caused by severe heartworm infestation.**

External

Description:-Sex:- Male ☐ Female ☒

Age Class:- ☐Pup ☐Juv ☐Sub adult ☒Adult ☐Old Adult

Approx age: 3.3yo

Colour: Tan **Tail Tip:** Nil **Build:** Slight

Socks: RFF Mid LFF Mid **Scars:** Over right shoulder (old) **Condition:** 2.5/5 poor-fair

Measurement: - Head Length **220mm** Ear Length **138mm** Shoulder Height **476mm**

Tail Length **280mm (to skin tip)** Body Length **680mm** Neck Width **324mm** Weight **10.35kg**

Carcass State: - Fresh ☐ Defrosted ☒ Decomposed ☐

Ectoparasites: 1 tick (kept) **External Injuries:** Slight amount of blood from nose and on LHS cheek and neck.

Mouth/Throat: Clear

Teeth: (Worn, broken or missing): Slightly worn and slight staining. Complete.

Broken Bones: (Internal and external): Nil felt from external examination

Internal

Blood under skin Yes ☐ No ☒ location:

Fat under skin Yes ☒ No ☐ location and thickness: 0.5mm Abdominal

Body cavity – Blood ☒ Air ☐ Other: Watery blood in abdomen (possibly post decomp). Large amount free blood clotted in chest cavity.

Heart – fat coverage and thickness: 30% 3mm Blood inside ☒ Parasites ☒ Type? Severe heartworm infestation blocking pulmonary artery.

Blood vessels: Clotted blood in vessels **Pericardium:** Unremarkable

Trachea/Bronchus: Clear **Lung** - Colour: Mottled-dark, R lung darker than normal. Condition: Severe/extensive pulmonary emphysema. Generalised atelectasis of both lungs.

Stomach – Full ☐ Part Full ☒ Empty ☐ 30 % Contents: Sandy slurry(74%), 1 piece blady grass (1%), Pear stems (4%), Insect larvae (1%) Mammal intestine (28%)

Small intestine – contents: Slurry

Large intestine – contents: Slurry

Faecal sample: Taken - awaiting results

Omentum fat Moderate

Gall Bladder: Full

Kidneys - colour: dark Fat coverage & thickness: 3mm 2%

Pancreas – Decomposed

Other Comments: Not overly anaemic. Melena (blood in faeces).

Parasites inside:

Heartworm test: Positive - control indet

Pathology samples: Nil taken

Liver: Unremarkable - sharp edges

Perirenal fat score: Moderate

Comment: Slightly decomposed

Spleen: Decomposed

Date of Necropsy: 4 Feb 2020 Time of Necropsy: 9:15

Skull and ear disposal: Buried on country. Ear DNA

Probable cause of death: **Intraspecific fighting - Dingo attack**

External

Description:- Sex:- Male ☒ Female ☐

Age Class:- ☐ Pup ☐ Juv ☐ Subadult ☐ Adult ☒ Old Adult

Approx age: 7.2 yo

Colour: Tan. **Tail Tip:** Few hairs & diamond **Build:** Solid

Socks: RFF Mid LFF Mid **Scars:** Multiple scars on ears and face. Between the eyes and under right eye (25mm)

Condition: 4/5 - Ideal condition.

Measurement: - Head Length **225mm** Ear Length **110mm** Shoulder Height **540mm**

Tail Length **330mm (to skin tip)** Body Length **730mm** Neck Width **340mm** Weight **15.4kg**

Carcass State: - Fresh ☐ Defrosted ☒ Decomposed ☐

Ectoparasites: Nil **External Injuries:** several puncture wounds around ventral chest and neck

Mouth/Throat: Clear

Teeth: (Worn, broken or missing): maxillary canines worn down by 60-70%, middle 2 mandibular incisors and left maxillary M2 missing

Broken Bones: (Internal and external): LHS rib 9 complete fracture mid shaft

Internal

Blood under skin Yes ☒ No ☐ location: Severe subcutaneous haemorrhage LHS chest wall + dorsal and lateral neck

Fat under skin Yes ☒ No ☐ location and thickness: 0.5mm abdominal

Body cavity – Blood ☒ Air ☐ Other: Significant amount blood in abdominal cavity, and in chest cavity.

Heart – fat coverage and thickness: 30%, 3mm Blood inside ☒ Parasites ☒ Type? Severe heartworm infestation

Blood vessels: Unremarkable -heart worm **Pericardium:** Unremarkable

Trachea/Bronchus: Clear **Lungs** - Colour: Pink mottled Condition: Both lungs collapsed

Stomach – Full ☐ Part Full ☐ Empty ☒ 0% Contents: Empty- 2 blades of blady grass.

Small intestine – contents: Slurry

Parasites inside: nil observed

Large intestine – contents: Slurry

Parasites inside: nil observed

Faecal sample: Hookworm 2+

Toxicology samples: Not taken

Omentum fat score: Moderate

Liver: Unremarkable, sharp lobes.

Gall Bladder: 100% Full

Perirenal fat score: Moderate

Kidneys - colour: Dark Fat coverage & thickness: 30% 3mm **Comment:** Unremarkable

Pancreas – Decomposed

Spleen: Small and contracted with 50% laceration half way down.

Other Comments: 2 testes descended. Severe subcutaneous haemorrhage on entire LHS chest wall with several puncture wounds into chest cavity and torn intercostal muscles. Severe dorsal and lateral neck subcutaneous haemorrhage and muscle maceration down to vertebrae. Rib 9 LHS broken half way. Significant muscle damage and bleeding left lower lumbar region and behind left kidney.

Age definitions: Pup: 1-4 mths, Juv: 4mths-1yo, Sub adult: 1-2 yo Adult: 2-5yrs Old Adult: 5yo+

Trachea/Bronchus: Clear **Lung** - Colour: mottled red Condition: Unremarkable

Stomach – Full ☒ Part Full ☐ Empty ☐ 100% Contents: Animal remains - sent to QM for identification..

Small intestine – contents: Slurry

Parasites inside: nil observed

Large intestine – contents: Slurry

Parasites inside: nil observed

Faecal sample: No results

Toxicology samples: Not taken

Omentum fat score: Abundant

Liver: Unremarkable, partly decomp sharp lobes.

Gall Bladder: Full

Perirenal fat score: Abundant

Kidneys - colour: dark- part decomp Fat coverage & thickness: 40% 3mm **Comment:** Unremarkable

Pancreas – Fully decomposed

Spleen: Small and contracted

Other Comments: LHS abdomen muscles lacerated. Dorsal cervical and thoracic regions severe subcutaneous haemorrhage and muscle maceration. Musculature in dorsal cervical region separated down to spine. Lower RHS neck muscles destroyed. RHS lower lumbar region severe subcutaneous haemorrhage and muscle maceration.

Age definitions: Pup: 1-4 mths, Juv: 4mths-1yo, Sub adult: 1-2 yo Adult: 2-5yrs Old Adult: 5yo+

QPWS FI Dingo Necropsy Checklist

Dingo id: UT17m_OB_2019_007

Date and location of death: 20 June 2019 Orchid Beach beachfront, K'gari.

Necropsy performed by: [redacted] assisted by 7026466, 7027334, 7027848, 1435908, 7027202,

Date of Necropsy: 4 Feb 2020 Time of Necropsy: 11:45

Skull and ear disposal: Buried on country. Ear DNA

Probable cause of death: **Exsanguination from stingray barb that severed left brachial artery**

External

Description:-Sex:- Male ☒ Female ☐

Age Class:- ☐Pup ☐Juv ☒Subadult ☐Adult ☐Old Adult

Approx age: 2 yo

Colour: Tan. **Tail Tip:** Nil & diamond **Build:** Slight

Socks: RFF LowLFF Low **Scars:** nil observed **Condition:** 2/5 - Poor condition.

Measurement: - Head Length **220mm** Ear Length **130mm** Shoulder Height **490mm**

Tail Length **380mm (to skin tip)** Body Length **680mm** Neck Width **310mm** Weight **10.9 kg**

Carcass State: - Fresh ☐ Defrosted ☒ Decomposed ☐

Ectoparasites: Nil **External Injuries:** Large round puncture wound in left axilla - entry point of barb

Mouth/Throat: Clear

Teeth: (Worn, broken or missing): Missing left middle mandibular incisor

Broken Bones: (Internal and external): Nil

Internal

Blood under skin Yes ☒ No ☐ location: Left chest wall. Small amount of subcutaneous bleeding inside upper left thigh.

Fat under skin Yes ☒ No ☐ location and thickness: 0.5mm abdominal

Body cavity – Blood ☒ Air ☐ Other: Significant amount blood in chest cavity.

Heart – fat coverage and thickness: 15%, 1mm Blood inside ☒ Parasites ☒ Type? Severe heartworm infestation

Blood vessels: Heart worm occluding pulmonary artery 80% **Pericardium:** Unremarkable

Trachea/Bronchus: Clear **Lungs** - Colour: Pale Condition: Both lungs collapsed and diffusely emphysemic

Stomach – Full ☐ Part Full ☐ Empty ☒ 0% Contents: Empty.

Small intestine – contents: Slurry

Parasites inside: nil observed

Large intestine – contents: Sand vegetation matter, fish bone

Parasites inside: nil observed

Faecal sample: Hookworm 1+ Spirometra 4+++

Toxicology samples: None taken

Omentum fat score: Minimal

Liver: Pale/anaemic, sharp lobes.

Gall Bladder: 75% Full

Perirenal fat score: Minimal

Kidneys - colour: Very pale Fat coverage & thickness: 10% 1mm

Comment: Unremarkable

Pancreas – Decomposed

Spleen: Small and contracted (batbiturate)

Other Comments: Only right testis descended. Severely underweight due to heartworm infestation. Barb punctured through left axilla severing brachial artery and then breaking inside chest. Barb = 110mm x 7mm. Euthenased under vet direction for injuries sustained.

Age definitions: Pup: 1-4 mths, Juv: 4mths-1yo, Sub adult: 1-2 yo Adult: 2-5yrs Old Adult: 5yo+
