# 1. PREAMBLE

The registered tenure holders of Authority to Prospect 676 (**ATP 676**) are Australian CBM Pty Ltd ACN 067 312 029 (70%), and Arrow CSG (Australia) Pty Ltd ACN 054 260 650 (30%) (**Registered Holders**).

The *Water Act (2000)* requires the tenure holder to prepare a baseline assessment plan (BAP) for the area of the holder's tenure. The plan must identify completed baseline assessments and priority areas where water bores other than those already assessed are or may be located. It must also provide a timetable for the completion of assessments in the priority areas.

This BAP identifies the priority areas in ATP 676 and then goes on to provide a timetable for the completion of baseline assessments in these priority areas. The priority area has been divided into six zones. A date by which baseline assessments will be completed has been allocated to each zone.

## 2. ACRONYMS & ABBREVIATIONS

Acronyms or abbreviations used in this document are defined in Table 2.1.

**Table 2.1 – Definitions and acronyms**

| Acronym /<br>Abbreviation | Definition                                                 |
|---------------------------|------------------------------------------------------------|
| BA                        | Baseline Assessment                                        |
| BAP                       | Baseline Assessment Plan                                   |
| BAT                       | Baseline Assessment Timetable                              |

### 3. IDENTIFICATION OF COMPLETED BASELINE ASSESSMENTS

Arrow Energy (Arrow) engaged Golder Associates between September 2008 and March 2009 to undertake baseline assessments of water bores near Dalby. This work resulted in the following outcomes: -

- The total number of bores targeted in this baseline assessment was 92.
- Of the 92 targeted bores there were 28 bores that could not be assessed due to: -
  - Abandoned or un-locatable -19 bores
  - Landholder's unwilling to participate - 9 bores
- Five bores assessed in this programme are within the tenure covered by this BAP.

These assessments were completed prior to the release of the Baseline Assessment Guideline in 2011. A summary of the on-ground Baseline Assessment process is provided below.

- Arrow Energy land access personnel contacted the relevant landowner to establish field visit and interview timing.
- Landholder interviews undertaken to extract as much information as possible about the bore, its history and any notable changes in groundwater level/quality.
- GPS measurements of bores were taken.
- Bore description.
- Measured water level using a water level dipper if access to the groundwater inside the casing was possible.
- Water samples taken.
- Field data sheets completed capturing the following information: -
  - GPS and cadastral information.
  - Owner contact details and site access.
  - Bore details: bore use/license details/field observations/pump details/bore surroundings.
  - Bore information provided by the owner.
  - Aquifer details.
  - Pumping data.
  - Field physical parameters: water level and water physical parameters (temperature, pH, electrical conductivity, and dissolved oxygen).

The data collected with these assessments is consistent with the current guidelines and therefore these assessments are considered to meet the requirements of a baseline assessment.

Completed baseline assessments are included in Appendix 1.

## 4. PRIORITY AREAS FOR BASELINE ASSESSMENT

Petroleum tenure holders are required to undertake baseline assessments for all water bores within the priority area identified in this plan. The priority area is defined by where registered bores are or may be located within the tenure.

A search of the DNRM GWDB enables the known registered bores to be located within the tenure. To define the area of the priority area where bores are and/or may be located, the nearest neighbour method has been used. This method utilises the 95<sup>th</sup> percentile of distances between the known registered bores to define the search radius for the unknown registered bores. This assumes that 95% of all registered bores are located within this radius. Table 4.1 outlines the distance between DNRM registered bores at the 50<sup>th</sup>, 75<sup>th</sup> and 95<sup>th</sup> percentile for ATP676.

**Table 4.1 – Nearest neighbour distances in ATP 676**

| Percentile       | Distance – km |
|------------------|---------------|
| 50 <sup>th</sup> | 0.70          |
| 75 <sup>th</sup> | 1.06          |
| 95 <sup>th</sup> | 1.80          |

Based on the nearest neighbour methodology, a search radius of 1.8km from each registered water bore shall be used to ensure that the majority of water bores within the tenure are captured. As a conservative measure this distance has been rounded to a radius of 2km for this BAP to define the priority area. Figure 1 identifies this area.

## 5. RATIONALE FOR BASELINE ASSESSMENT TIMETABLE

Within the ATP 676 only production testing has taken place. There will also be priority areas in which we will conduct baseline assessments as a result of current production in the adjacent petroleum leases (PL194 and PL230).

Production testing results in impacts to underground water that diminishes over time. This is because production testing involves removal of a finite volume of water over a short period of time. No further water is removed after the production test. Following the production test, the groundwater system can start to recover.

A baseline assessment plan (BAP) for ATP 676 (Doc: 99-V-PL-0022) was submitted on 23 June 2011. This BAP proposed assessments for all bores within priority areas within 5km of existing production testing wells and production wells in the Surat Basin be completed by 31 December 2013. This BAP was approved by DEHP to take effect on the 5 August 2011 (Arrow\_BAP). An amended BAP (Doc: 99-V-PL-0031 rev\_2) was submitted on 23 October 2013 and approved on 12 November 2013 (your ref: 101/0001498-002)

It is proposed that in the Surat Basin (including but not limited to Authority to Prospect 676), baseline assessments will be undertaken for all water bores which are within a priority area and located within 5km of a production testing well by the earliest of the following:

1. Before production testing starts, if, during the production testing, water will be taken from the aquifer supplying the bore;
2. The day after a period of 30 days, whether continuous or not, of undertaking production testing.

Baseline assessments of water bores in the remainder of the priority area will be undertaken by the dates provided in the baseline assessment timetable (BAT). If production testing started prior to the commencement of Section 398 of the *Water Act (2000)*, then, in accordance with the *Water Act (2000)*, the BAT proposes a day by which a baseline assessment will be undertaken for each water bore in the priority area.

In the case of ATP 676, production testing at the Dundee Production Test Wells started in 2006, prior to the commencement of Section 398 of the *Water Act (2000)*. Hence the BAT proposes a date by which baseline assessments will be undertaken for the water bores in the priority areas within 5km of the these production testing wells. This area is defined as Zone 2 in Figure 2.

New production testing has commenced from wells identified as Hopeland, (Zone 1 on Figure 2). Baseline assessments of water bores in Zone 1 will be completed by the date listed in the BAT, consistent with this Section. A proposed production test identified as Wyalla was cancelled on 30 June 2014.

Production testing has commenced from the Punchbowl Pilot however this test is not within a priority area.

ATP 676 is located adjacent to PL194 and PL230. Production in PL194 and PL230 commenced prior to the commencement of Section 398 of the *Water Act (2000)*. The BAP for ATP 676 therefore includes two additional priority areas (zones 3 and 4) to account from potential drawdown arising from production of petroleum conducted in PL194 and PL230 as follows:

- Zone 3 represents a 5km distance from the nearest production wells, and
- Zone 4 represents a 10km distance from the nearest production wells.

The BAT for ATP676 proposes dates by which baseline assessments will be undertaken for the water bores in Zone 3 and Zone 4 in Figure 2.

The BAT takes into account the logistics of undertaking baseline assessments including:-

- Resourcing including suitably qualified staff with the appropriate level of skill, experience and expertise along with equipment required;
- Land access as required under the Water Act;
- Establishment of assessment procedures as outlined in the DEHP Baseline Assessment Guidelines; and
- Development of standard operating procedures and safety management documentation.

If water bores are identified during this process which are not registered (with the DNRM):

1. A baseline assessment of the water bore will be undertaken as detailed above;
2. Information collected from the baseline assessment will be reported in the approved form to the bore owner and the OGIA; and
3. The locations of the unregistered water bores will be included in any future amendments of this BAP.

## 6. CURRENT AND FUTURE PRODUCTION

No production testing is planned within ATP 676 in the next twelve months. The production testing wells identified as Punchbowl and Hopeland have commenced.. Should any other production testing be planned for ATP 676, this plan will be amended. These production tests are identified on Figure 2.

# ARROW ENERGY - SURAT GAS PROJECT

## 7. BASELINE ASSESSMENT TIMETABLE

Table 7.1 shows the timetable for the completion of the baseline assessments for each of the zones identified in Figure 2.

**Table 7.1 – Baseline assessment timetable**

| Zone   | Timeframe         | Status          |
|--------|-------------------|-----------------|
| Zone 1 | 31 September 2013 | Completed       |
| Zone 2 | 31 December 2013  | Completed       |
| Zone 3 | 31 December 2013  | Completed       |
| Zone 4 | 31 December 2014  | To be completed |
| Zone 5 | 31 December 2023  | To be completed |
| Zone 6 | 31 December 2023  | To be completed |

All of the water bores in Zone 5 will be assessed by the 31 December 2023, unless:

- They fall within 5 km of any future production test to be carried out on this tenure, in which case this baseline assessment plan will be amended
- They fall within an area for which a Petroleum Lease is awarded, in which this baseline assessment plan will be amended
- They fall within any areas that are relinquished before that date, in which case they will not be assessed at all

Currently, there are no registered water bores identified within Zone 6. However, should Arrow be notified of any water bores in Zone 6, these will be assessed by the 31 December 2023, unless:

- They fall within 5 km of any future production test to be carried out on this tenure, in which case this baseline assessment plan will be amended
- They fall within an area for which a Petroleum Lease is awarded, in which this baseline assessment plan will be amended

# APPENDIX 1 – COMPLETED ASSESSMENTS 30 JUNE 2014

| General Information |          |             |             | Bore Location |       |         |               | Owner Details           |                                                   |                                                         |                                                                             |                               |                               |                                                       |                             |                                       |                              |            |      |            |                                             |                                     |                      |
