From: Sally Morris, Wildlife Ranger, Townsville

Subject: Agile Wallaby population count in South Mission – 3 February 2014

Background

A count of the Agile Wallaby population was conducted on Monday 3rd February 2014 between 11:30 and 13:00 in the residential area of South Mission Beach by DEHP Wildlife Rangers Sally Morris and Senior Ranger Tony Frisby.

The weather at the time of survey was approximately 26 degrees Celsius with low to moderate SE/E winds and 100% cloud cover. The Agile Wallaby population appeared to be in good condition, with a high number of juvenile wallabies present. Grass was plentiful and weeds were prolific in some areas due to recent rains.

A total of approximately 950 Agile Wallabies were counted. This included a residential block owned by [REDACTED] (2 hectares), where approximately 500 Agile Wallabies were counted. It appeared that the wallabies were using this location as a safe haven presumably because it backs onto a 10.5 hectare nature refuge.

Subject: Agile Wallaby population at South Mission Beach

Hi Mike,

I have been involved on Three separate occasions with regards to the Agile wallabies in the South Mission beach area.

- The first occasion on the 20th September 2012 I was assisting Karen Dabinett with a DMP assessment for the lethal take of Agile Wallabies on a cattle property owned by Wahoonga Holdings Pty Ltd which is located on the (G:\NQWildlife\Permit Applications\DMP\2012\Wahoonga Holdings s.49) also you can view the photos that were taken. The permit was granted and signed off by the Team leader.
- On the Second occasion being the 12th April 2013, Sally and I were tasked to count Agile wallaby numbers to ascertain if and what numbers existed in the South Mission beach area. We survey between 1 to 2pm. Overcast, drizzling. Approximately 400 Agile wallabies counted via estimating populations as we drove down each Street. On this occasion we did not use any particular method to count the numbers of Agile's
- Please find attached on the 3rd occasion Sally and I conducted an Agile wallaby population survey on the 23rd April 2013, survey 5 to 6pm. Clear, sunny day. Approximately 1200 Agile wallabies counted via breaking the survey area up into small parts and accurately estimating numbers I believe this is called Quadrat (see attached Google Earth image).

On the first occasion Karen and I noticed that there were some Agile Wallabies that were in poor condition due to the lack of grass available on the Wahoonga Holdings property. This was due to the lack of rain in the area and high numbers of Agile's in the area. On the next two occasions the Agile Wallabies were in good condition and had plenty of grass available. I also noticed that there was a lot of juvenile Agile's in the area

I also found information from [Cairns Regional Council Summit.pdf](#) which may also be of use in the future. Also I have attached the email Correspondence that I had with the Cassowary Coast Regional Council.

This is all the information that I have that I can supply, I will continue to search for further information.

Regards,

Skeen

Dear Ms Cooksley,

Thank you for your e-mail correspondence dated 10 April 2013 regarding agile wallaby populations in the residential area of South Mission Beach.

Further to email correspondence with Ranger Skeen West; from time to time, wildlife comes into conflict with humans for a range of reasons. The legislation recognises that, in some situations, it is necessary to take wildlife to minimise damage to property or protect human health or wellbeing. A damage mitigation permit allows a person to remove and relocate or cull and disperse wildlife in such circumstances.

Alternatively, a property management plan can be implemented to provide an accredited wildlife management framework with accommodates land management activities, local government area administration, while protecting and conserving wildlife. Please find attached information [REDACTED] and Property Management Plans.

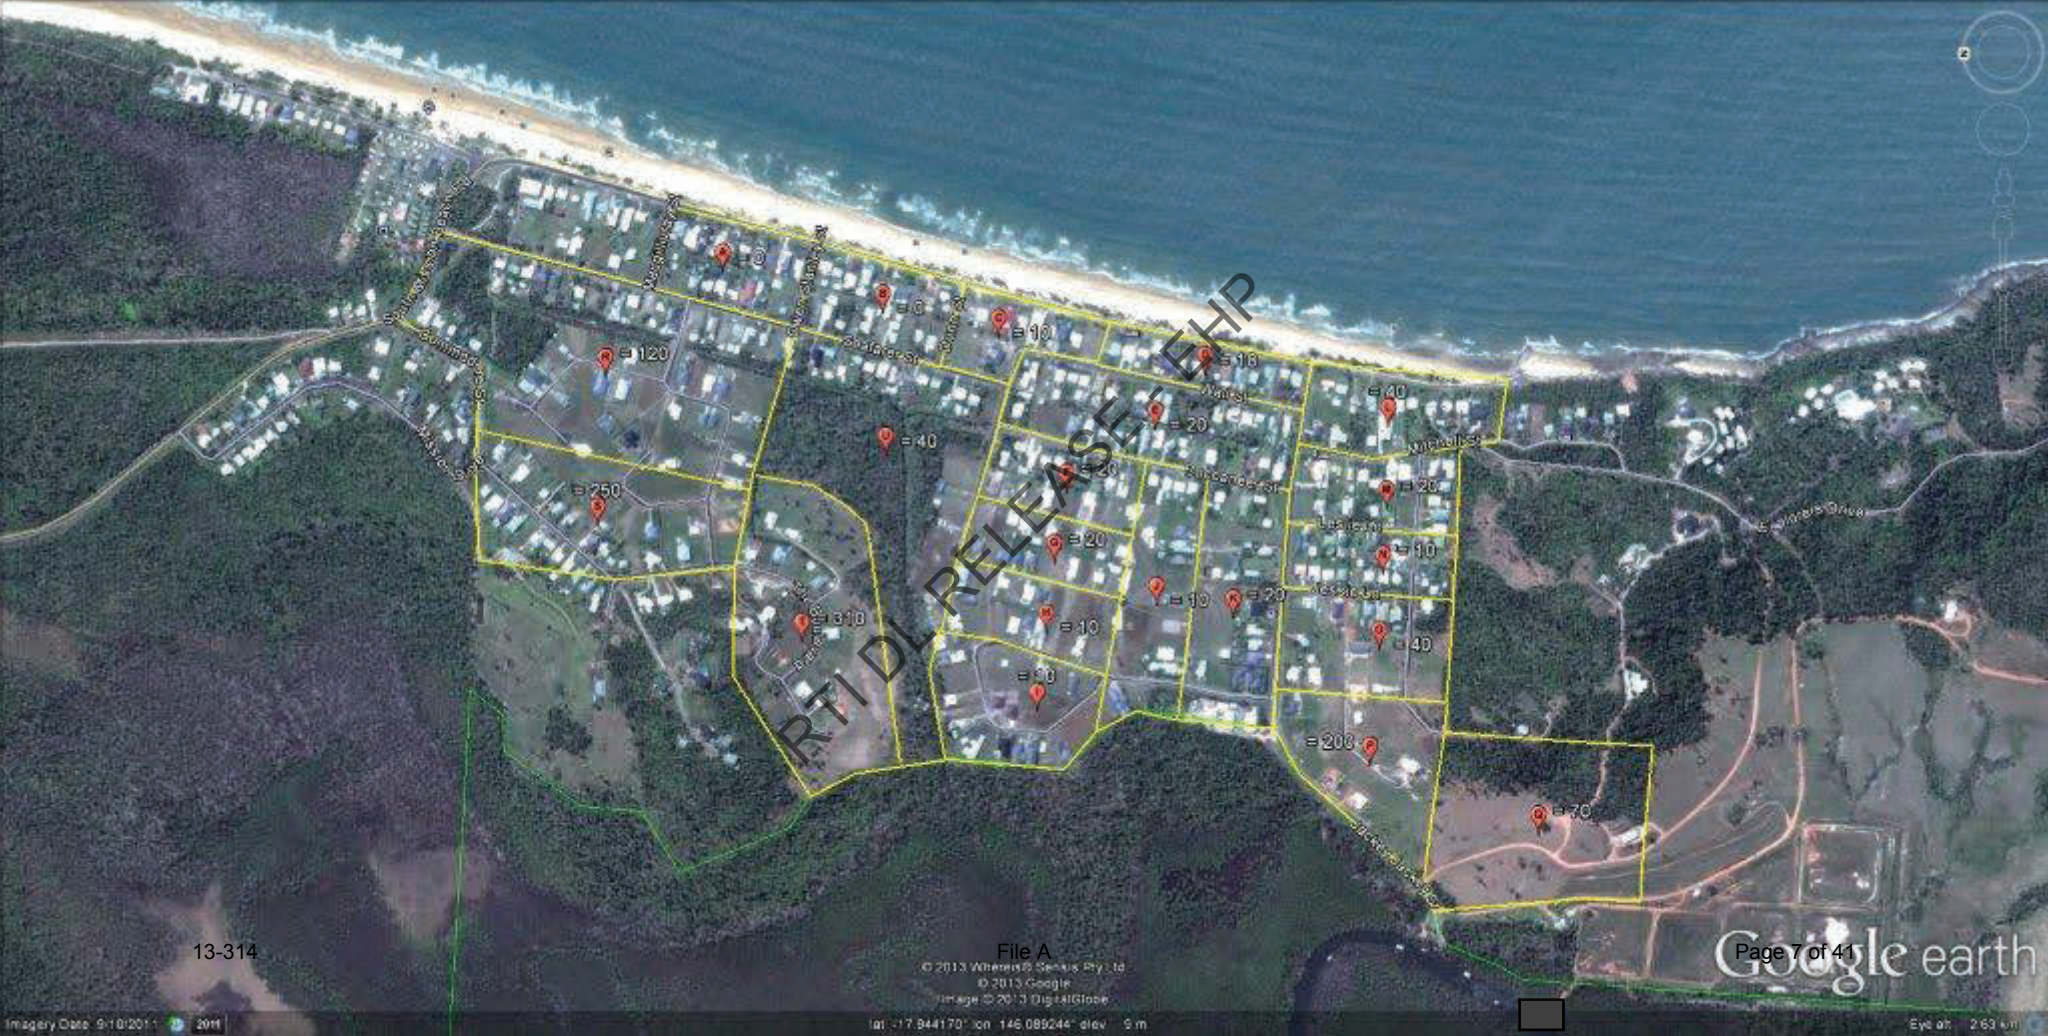

Should you have any further enquiries, please contact Michael Joyce, Northern Team Leader, Wildlife Operations for the department on (07) 4796 7787.

Yours sincerely

Hi Jo,

Further to your email below, EHP has not needed to have in place a Department's policy/procedure/processes for managing and monitoring problem wallabies. EHP has in place Damage Mitigation Permits or Property Management Plans to assist the public to mitigate against problematic wildlife. I can propose seeking advice from an environmental consultant to look into population densities.

If you have, further inquiries please feel free to email me.

Hello Skeen

Thank you for getting back to Council about this issue and for advising that you will liaise with Damon Sydes, Council's Coordinator Natural Resource Management about the options available re problem wallabies at SMB.

In the meantime, it would still be prudent and most helpful if EHP could provide the Council with a copy of the Department's policy/procedure/processes for managing and monitoring problem wallabies.

This information would greatly assist our officers to respond to enquiries about the issue.

Your advice, by return email, would be greatly appreciated.

Thanks

Hi Joe,

Your email about Wallabies in the south mission beach area has been forwarded to me for action. I noted that other council staff are also involved in the matter. In reading the emails and contacts we have had I have determined that I should discuss this with Damon Sydes the issues and provided assistance where needed. If this is not correct, please do not hesitate to contact me.

For your information your email had one error which I would like to make sure is corrected, as it is possible to apply for and be granted a DMP for wallabies and a number have been issued in mission beach in previous years.

Damon,

I am writing to you to provide you with information, to assist the Cassowary Coast Regional Council in controlling the number of Wallabies in the South Mission Beach area. The Department of Environment and Heritage (EHP) have issued Damage Mitigation Permits to remove and relocate as well as the culling of wildlife.

I will call latter to day at a time that is convenient for you to discuss options.

Please do not hesitate to call me on the number below.

Subject: Agile Wallaby population count in South Mission, Wongaling and Mission Beaches.

Background

A count of the Agile Wallaby population was conducted on Wednesday 15th January 2014 between 18:00 and 19:40 in the residential areas of South Mission, Wongaling and Mission Beaches by EHP Wildlife Rangers Sally Morris and Wade Kelly.

The weather at the time of survey was approximately 26 degrees Celsius with low to moderate SE/E winds and 100% cloud cover. The Agile Wallaby population appeared to be in good condition, with a high number of juvenile wallabies present. Grass was plentiful and weeds were prolific in some areas due to recent rains.

A total of approx [REDACTED] across all three survey areas; 520 at South Mission Beach, 20 at Wongaling Beach and 115 at Mission Beach. The highest density of Agile Wallabies were observed at the southern end of Jackey Jackey Street, South Mission Beach which is adjacent to a large private grassland property.

Subject: FW: South Mission Beach - Agile Wallaby

Hi Beck,

Please see attached file from Skeen and Sally who did the dusk assessment of south mission beach 23/4/2013. The numbers are still very high and the verbal report would indicate that these counts are all on the down side of the actual number. Also that some of the males are very large and that no animals seemed in distress in any way.

Further to this report I received a phone call from ^{s.49} who were trying to assist in come to some conclusion on the matter. I had a very good phone call with the person and explained the situation from our perspective. They were surprised and supportive of our stance. This phone call was a similar repeat of one received yesterday from a lady called ^{s.49} Both of which wanted to broker a deal between the parties. (there words not mine)

For your information.

Thanks
Mike
