Good Afternoon Brett,

I have just received the below enquiry for your consideration.

If there is any information you could provide me with on this matter it would be very much appreciated.

Kind Regards

*Tom*

**Subject:** Request for immediate dust monitoring-FW: Proposed (Wagner quarry) MCU2701103

Dear Councillor Gates and Mr Boothman

I have just recently been made aware that a rock sample taken from the Hanson Quarry has been analysed to contain 37% Silica and 3% Asbestos.

I am extremely concerned that our health may be at risk, as you both well know that we have several other quarries in our immediate area and that those quarries most probably have the same type of rock with similar or higher silica and asbestos compositions.

I believe that the Hanson Quarry is one of the few quarries in our area that does its rock crushing in an enclosed building yet even then as you can see from the photos I sent you in 2008(refer attachments and email below), that considerable dust emanates from that quarry and this dust is in turn deposited downwind into surrounding suburbs.

Since I have become aware of the Hanson MCU201300734 and forwarded my submission (which I have copied to yourselves previously) I did a little more research and have noted that the Queensland Government undertook extensive tests (2008-2009) at Mt Cotton Quarry for the PM 2.5 proportion of respirable crystalline silica to ensure that the community was not exposed to excessive levels. The Mt Cotton Quarry had a claimed output of some 500,000 tonnes and was at the time described as a super quarry.

From information gathered in the Hanson MCU documentation I believe that the total output from the quarries in our area is some 5 million tonnes i.e. 10 times the output from Mt Cotton(this would effectively make our quarries Ultra Super Quarries), more worrying still, I believe that most of those quarries do not do their crushing in an enclosed building therefore the dust is released into the surrounding communities unfiltered.

I ask that as a side issue unrelated to the Hanson application which may take some time to resolve, that you both request on our behalf for tests to be conducted immediately in the Yatala and Ormeau downwind locations for levels of PM 2.5 respirable silica and asbestos. Additionally I ask that you both request for our State Government to legislate that all quarries located near suburban or populated areas, do their crushing in enclosed buildings and that their emissions are continuously monitored.

Regards

Subject: Proposed (Wagner quarry) MCU2701103

Date: Sat, 18 Oct 2008 17:40:45 +1000

Hello Donna

We are aware that you oppose the abovementioned proposal and were pleased to read your comments in the Albert Logan News Wednesday, October 15, 2008. We noted that Council was concerned in protecting the Flora and Fauna in the area as well as the amenity of the residents overlooking the quarry site.

We believe however that there is also an equally important issue that Council should be actively addressing on behalf of the Ormeau and Yatala residents and that is the dust pollution emanating from the existing 5-6?? quarries

in our region and this possible future quarry. This point was further highlighted to us this morning by a concerned Ormeau resident who advised that members of a family living near one of the quarries had been diagnosed with silicosis and that the fine airborne silica dust is known to travel many kilometres. (Ormeau and Yatala residents are downwind from these quarries, when south easterlies blow Yatala is on the receiving end and Ormeau gets its share when the direction changes to south westerly).

We have noticed a considerable increase of dust build up in our own home and find it quite surprising considering that we have built our home on a slab, and that a large percentage of our living areas are tiled, our gardens and lawns are established and the driveway and perimeter of our dwelling is concreted (i.e. there is no localised soil or dust disturbance on our property). We find ourselves sneezing most mornings despite weekly floor mopping and vacuuming. The dust is even getting into our enclosed crystal and media cabinets. It has recently become more evident on our window screens and window sills. Well before our alarm that it may contain Silica particles, we started taking photos of occasional dust clouds emanating from the direction of the Quarries for future reference. Please refer to the attachments. RIMG0227 taken 7 oct08, RIMG0223 taken 2 oct08, RIMG0222 taken 1 oct08. After conversations with several of Yatala's and Ormeau's we are obviously not alone with this concern and would be obliged if Council in conjunction with the EPA would organise the installation and maintenance of monitoring air monitoring equipment in residential areas, in order to ensure that the residents' health is not being compromised by this already high density of Quarries so close to residents.

The following are extracts from various sites on this topic, which we have added in support of our request for monitoring equipment.

- **Spreading Knowledge**

Today, there are cards circulated by OSHA that provide information that can create awareness about silicosis. These pamphlets explain the most common factors that lead to the affliction. Generally speaking, the most common cause of silicosis is sandblasting. Other practices that are associated with silicosis are cement, brick, china, ceramic and asphalt manufacturing and the mixing and drilling of concrete and mortar.

- Silica is the second most common [mineral](#) on earth. It is found in sand, many rocks such as granite, sandstone, flint and slate, and in some coal and metallic ores. The cutting, breaking, crushing, drilling, grinding, or abrasive blasting of these materials may produce fine silica dust. It can also be in soil, mortar, plaster, and shingles. Silicosis is due to deposition of fine dust (less than 1 micrometre in diameter) containing crystalline silicon dioxide in the form of alpha-quartz, [cristobalite](#), or [tridymite](#). The induction period between initial silica exposure and development of radiographically detectable nodular silicosis is usually 10 years. Shorter induction periods are associated with heavy exposures, and acute silicosis may develop within 6 months to 2 years following massive silica exposure.
- Although silicosis has been known for centuries, the [industrialization](#) of [mining](#) has led to an increase in silicosis cases. [Pneumatic drilling](#) in mines and less commonly, mining using [explosives](#), would raise rock dust. In the United States, a 1930 [epidemic of silicosis](#) due to the construction of the Hawk's Nest Tunnel near [Gauley Bridge, West Virginia](#) caused the death of more than 400 workers.

- **Silica dust and silicosis**

With the boom in construction going on around Sydney, we often see workers in excavators digging in a cloud of dust. Or you may see construction workers drilling or cutting into concrete with no respiratory protection.

These workers are at high risk of developing *silicosis*, a serious lung disease caused by the accumulation of silica dust in the lungs. The scarring of the lungs causes stiffening which will obstruct breathing and cause shortness of breath. This can lead to permanent heart and lung disease.

## What is silica dust?

Silica is the main component in sand and in rocks like sandstone and granite. Many workplaces are not aware that common building products such as clay bricks, concrete, tiles and fibro cement products contain silica. Silica dust is usually created when such building products, sandstone or rocks are cut, drilled or worked on in a way that creates fine particles of silica in the air. It is breathing in this crystalline form of silica that causes silicosis.

## Who is affected?

Silicosis is not a naturally occurring disease. Its development is directly associated with workplace exposure to silica dust. Workers who are most at risk include those engaged in tunneling and excavation work, road building, demolition work and explosive blasting work, as well as those in slate, granite cutting and glass manufacturing industries, brickmaking and some manufacturing processes.

## Health effects of silica dust

Initial exposure to silica dust will cause irritation of the eyes, nose and throat like most other dusts. However, if excessive amounts of silica dust are breathed into the lungs over a period of time, it can cause damage to the lung tissue. Other than some breathlessness during exercise, the disease can remain free of symptoms for 10-20 years after exposure.

The most common form of silicosis develops after long exposure to relatively low concentrations. Once the disease has begun, it will continue to progress even if the worker is removed from further exposure. There is no medical treatment for silicosis. People with silicosis are also at greater risk of developing lung cancer. In 1996 the International Agency for Research on Cancer classified crystalline silica dust as a human carcinogen (Group 1).

The size of the silica particles is important in causing the disease. Larger particles are usually prevented from reaching the lung's small air sacs, it is the smaller particles (less than five thousandths of a millimetre) that are the most dangerous.

The development of silicosis depends on a number of factors including:

- the amount and kind of dust inhaled
  - the percentage of free silica in the dust
  - the form of silica
  - the size of the silica particles
  - the duration of exposure
  - the individual's natural body resistance
  - the presence or absence of complicating factors (such as infection).
- **Silicosis-** Repeated and prolonged exposure over many years to relatively high concentrations of crystalline silica in the air is known to cause a lung disease called silicosis. Such exposure may occur for instance when rocks containing crystalline silica are ground up during mining or quarrying operations. The disease may also occur following short-term exposure to extremely high concentrations. [Queensland Health](#) has more information on this topic.

Dear Mr Glosko

Thank you for your most prompt reply.

I look forward to any information that your department provides(in writing for all the community), however until you can advise me exactly what the current level of pollution downwind from the quarries is, there is little point in wasting your staff's time or mine talking about it.

I am very much aware, as you may have noted that many other residents living near quarries have the same concerns, however as I have highlighted to you, our region appears to have a much greater volume of material being quarried in comparison, all within close proximity of residential estates located downwind(with the crushing being conducted in the open air), also I am not aware that asbestos has been monitored or mentioned in the Mt Cotton or the more recently proposed Gold Coast quarry at Reedy Creek investigations/assessments.

Should you consider installing monitoring equipment on my property, I will be happy to make arrangements with yourself or your staff(providing that the information obtained is available online 24/7), until then I would prefer to keep our communication open and in writing.

*As a side issue, my wife has just advised that a grassy/ammonia odour has just started to permeate in our house, the time she noticed it at our kitchen window is exactly 7:05. You will note that this time or close to it has been reported many times before. Level this time is about 1-3, it is raining lightly and there is a slight Easterly breeze.*

Regards

Date: Thu, 11 Dec 2014 07:50:28 +0000

Dear ( 6) Personal in

Thank you for your e-mail.

The department registered your concern raised with Councillor Gates and MP Boothman dated 30 November on the same date. The compliant reference number is: CR65296

The instruction provided to the Compliance Officer assigned was to contact the Department of Science, Information Technology, Innovation and the Arts (DSITIA) - Air Sciences section, to request further advice and support to determine is validity of the health concerns raised.

The concern you raise has been somewhat common for residents living within proximity to quarries throughout Queensland, and DSITIA have been activity involved in investigating these concerns. DSITIA have specialist knowledge, expertise and equipment to determine the level of risk posed by such activities.

Additionally, quarry sites have conditions of approval that restrict the release of dust and particulate matter beyond the boundary, and stipulate appropriate monitoring requirements in the event of either a complaint or as requested by the administering authority. The department continues to monitor operator performance via an evolving risk based site inspection program, however can target specific sites outside of this program if alerted to community concerns. As always, I encourage you and any other member of the community to contact the department as soon as possible should you become aware of an incident, or have concerns about the operation of a regulated site.

The department's Pollution Hotline is monitored 24 hours a day, seven days a week, and the department maintains a roster of on-call officers outside of normal business hours. The telephone number for the Pollution Hotline is: 1300 130 372

In regards to the online air monitoring in and around Brisbane, this is not under the control of DEHP.

<http://www.qld.gov.au/environment/pollution/monitoring/air/>

I will ask my officer to obtain further information regarding this network and the entity responsible for the network prior to contacting you.

An officer will contact you soon to discuss this matter further.

**Subject:** FW: Response Cr Gates: Request for immediate dust monitoring-FW: Proposed (Wagner quarry) MCU2701103

Att: Mr Brett Glosko

Dear Mr Glosko

I refer to my email below to Councillor Gates and Mr Boothman dated 30 November 2014.  
I also refer to Councillor Gates's response below dated 11 December 2014.

As per Councillor Gates's advice, I was already aware that this falls under the jurisdiction of the DEHP, however I felt that what I was requesting would be more achievable with Councillor Gates's and Mr Boothman's help.

You will appreciate from an earlier email to Councillor Gates (**also below for your reference, including photos taken in 2008**) dated 18 October 2008 that quarry dust has been a concern for several years. This concern has been greatly amplified since I became aware of the Hanson MCU application for the expansion of their operation, of particular worry is the revelation that the rock being extracted by the quarries in the Darlington Ranges contains 37% silica and 3% asbestos (**assumption based on Hanson rock sample analysis**) and that the other quarries unlike Hanson do their crushing in the open.

I ask that as a matter of urgency that your department undertake immediate constant monitoring of dust emissions downwind from all the quarries in our area particularly for the PM 2.5 respirable silica fraction and the asbestos component which I believe is even more harmful when inhaled. I also ask that this information is made readily available online in a similar way to what is currently available for Springwood and many other suburbs around Brisbane.

Please note: Although this is a personal request, I intend to share your reply in full with my fellow residents.

I look forward to your prompt reply.

Dear h4p4( 6) Personal inform

Although recognising the concerns re dust recently raised were under State jurisdiction, I forwarded to Council's Environmental Health for advice. They advise all quarries located in the area hold an Environmental Authority with the Department of Environment and Heritage Protection (DEHP) and you are advised to contact DEHP in relation to your concerns regarding potential environmental health risks from air pollution resulting from operations being undertaken. Officers of DEHP can be contacted on the following telephone number 1300.130.372 or 55832139.

At least this provides a direct contact number for you.

Hello Donna

We are aware that you oppose the abovementioned proposal and were pleased to read your comments in the Albert Logan News Wednesday,October 15, 2008. We noted that Council was concerned in protecting the Flora and Fauna in the area as well as the amenity of the residents overlooking the quarry site.

We believe however that there is also an equally important issue that Council should be actively addressing on behalf of the Ormeau and Yatala residents and that is the dust pollution emanating from the existing 5-6?? quarries in our region and this possible future quarry. This point was further highlighted to us this morning by a concerned Ormeau resident who advised that members of a family living near one of the quarries had been diagnosed with silicosis and that the fine airborne silica dust is known to travel many kilometres.(Ormeau and Yatala residents are downwind from these quarries,when south easterlies blow Yatala is on the receiving end and Ormeau gets it's share when the direction changes to south westerly).

We have noticed a considerable increase of dust build up in our own home and find it quite surprising considering that we have built our home on a slab,and that a large percentage of our living areas are tiled,our gardens and lawns are established and the driveway and perimeter of our dwelling is concreted ( i.e. there is no localised soil or

dust disturbance on our property). We find ourselves sneezing most mornings despite weekly floor mopping and vacuuming. The dust is even getting into our enclosed crystal and media cabinets. It has recently become more evident on our window screens and window sills. Well before our alarm that it may contain Silica particles, we started taking photos of occasional dust clouds emanating from the direction of the Quarries for future reference. [Please refer to the attachments. RIMG0227 taken 7 oct08, RIMG0223 taken 2 oct08, RIMG0222 taken 1 oct08.](#)

After conversations with several of Yatala's and Ormeau's we are obviously not alone with this concern and would be obliged if **Council in conjunction with the EPA would organise the installation and maintenance of monitoring air monitoring equipment in residential areas**, in order to ensure that the residents health is not being compromised by this already high density of Quarries so close to residents.

The following are extracts from various sites on this topic, which we have added in support of our request for monitoring equipment.

### Spreading Knowledge

Today, there are cards circulated by OSHA that provide information that can create awareness about silicosis. These pamphlets explain the most common factors that lead to the affliction. Generally speaking, the most common cause of silicosis is sandblasting. Other practices that are associated with silicosis are cement, brick, china, ceramic and asphalt manufacturing and the mixing and drilling of concrete and mortar.

Silica is the second most common [mineral](#) on earth. It is found in sand, many rocks such as granite, sandstone, flint and slate, and in some coal and metallic ores. The cutting, breaking, crushing, drilling, grinding, or abrasive blasting of these materials may produce fine silica dust. It can also be in soil, mortar, plaster, and shingles. Silicosis is due to deposition of fine dust (less than 1 micrometre in diameter) containing crystalline silicon dioxide in the form of alpha-quartz, [cristobalite](#), or [tridymite](#). The induction period between initial silica exposure and development of radiographically detectable nodular silicosis is usually 10 years. Shorter induction periods are associated with heavy exposures, and acute silicosis may develop within 6 months to 2 years following massive silica exposure. Although silicosis has been known for centuries, the [industrialization](#) of [mining](#) has led to an increase in silicosis cases. [Pneumatic drilling](#) in mines and less commonly, mining using [explosives](#), would raise rock dust. In the United States, a 1930 [epidemic of silicosis](#) due to the construction of the Hawk's Nest Tunnel near [Gauley Bridge, West Virginia](#) caused the death of more than 400 workers.

## Silica dust and silicosis

With the boom in construction going on around Sydney, we often see workers in excavators digging in a cloud of dust. Or you may see construction workers drilling or cutting into concrete with no respiratory protection.

These workers are at high risk of developing *silicosis*, a serious lung disease caused by the accumulation of silica dust in the lungs. The scarring of the lungs causes stiffening which will obstruct breathing and cause shortness of breath. This can lead to permanent heart and lung disease.

### What is silica dust?

Silica is the main component in sand and in rocks like sandstone and granite. Many workplaces are not aware that common building products such as clay bricks, concrete, tiles and fibro cement products contain silica. Silica dust is usually created when such building products, sandstone or rocks are cut, drilled or worked on in a way that creates fine particles of silica in the air. It is breathing in this crystalline form of silica that causes silicosis.

## Who is affected?

Silicosis is not a naturally occurring disease. Its development is directly associated with workplace exposure to silica dust. Workers who are most at risk include those engaged in tunneling and excavation work, road building, demolition work and explosive blasting work, as well as those in slate, granite cutting and glass manufacturing industries, brickmaking and some manufacturing processes.

## Health effects of silica dust

Initial exposure to silica dust will cause irritation of the eyes, nose and throat like most other dusts. However, if excessive amounts of silica dust are breathed into the lungs over a period of time, it can cause damage to the lung tissue. Other than some breathlessness during exercise, the disease can remain free of symptoms for 10-20 years after exposure.

The most common form of silicosis develops after long exposure to relatively low concentrations. Once the disease has begun, it will continue to progress even if the worker is removed from further exposure. There is no medical treatment for silicosis. People with silicosis are also at greater risk of developing lung cancer. In 1996 the International Agency for Research on Cancer classified crystalline silica dust as a human carcinogen (Group 1).

The size of the silica particles is important in causing the disease. Larger particles are usually prevented from reaching the lung's small air sacs, it is the smaller particles (less than five thousandths of a millimetre) that are the most dangerous.

The development of silicosis depends on a number of factors including:

- the amount and kind of dust inhaled
- the percentage of free silica in the dust
- the form of silica
- the size of the silica particles
- the duration of exposure
- the individual's natural body resistance
- the presence or absence of complicating factors (such as infection).

**Silicosis**- Repeated and prolonged exposure over many years to relatively high concentrations of crystalline silica in the air is known to cause a lung disease called silicosis. Such exposure may occur for instance when rocks containing crystalline silica are ground up during mining or quarrying operations. The disease may also occur following short-term exposure to extremely high concentrations. [Queensland Health](#) has more information on this topic.

Dear Mr Hill,

The Letter attached is in response to your communication to YRA dated 26<sup>th</sup> June 2015 (received 16<sup>th</sup> July 2015 by the YRA Committee) and is self-explanatory.

We sincerely thank you for taking the time to consider of concerns.

Yours truly,

4p4( 6) Personal inform- YRA Coordinator on behalf of the YRA Committee and Members

Date: 22<sup>nd</sup> July 2015

Dear Mr Hill,

We refer to your letter ref CTS 12768/15 dated 26 June 2015.

Thank you for your letter and please excuse our late reply as this letter was received by the YRA committee on the 16/7/2015.

Paragraph 3 on the first page of your letter indicates that PM<sub>10</sub> and PM<sub>2.5</sub> dust particles will be continuously monitored, if this is the case and means that 24/7 continuous monitoring will be undertaken indefinitely which will be readily available to the public online (as is the case for Springwood, Woolloongabba and many other monitoring stations in Queensland) then we are pleased and satisfied that our health will be safeguarded, as it would be in line with what we have requested in our previous letters including our last letter dated 29 May 2015 to the Hon. Dr Steven Miles MP.

If however this continuous monitoring will only occur over several months as implied in paragraph 1 of page 2, we then consider this to be totally inadequate and nowhere near the quality of the level 1 assessment as defined in the "Protocol For Environmental Management: Mining and extractive Industries". Please refer to the following link

<http://www.epa.vic.gov.au/~media/Publications/1191.pdf>

Note on page 6 that for a quarry with an output greater than 500,000 tonnes/yr, a level 1, 24/7 assessment is required for a 12 month period, ref page 9. Also please note on page 8 the limit for asbestos of 0.2 micro grams per cubic metre annual average, the respirable crystalline silica (As PM<sub>2.5</sub>) limit is 3 micro grams per cubic metre annual average, so we trust that the 7 day sampling periods will be taken over 12 months in order to estimate an accurate annual average. **As stated in earlier correspondence we believe the total output of the quarries in our area is some 5 million tonnes, 10 times the volume of a quarry in Victoria which would require the level 1 assessment, as such we do not think that our request for level 1 continuous monitoring is unjustified or unreasonable.**

Please excuse us if we appear rude or overly demanding but it is we who are downwind from the quarries and other dust emitting industries such as open air crushing and grinding of demolition and building waste which will only grow larger in number in our currently undeveloped and vacant industrial estates adjacent to the residents of Yatala and Ormeau.

Thank you again for taking the time to consider our concerns.

Yours truly,  
YRA Committee

Dear sch4p4( 6) Personal info

Thank you for your letter dated 22 July 2015 regarding the upcoming dust and bioaerosol monitoring in the Yatala area. I would like to take this opportunity to clarify some points.

Continuous monitoring for particulate matter will occur for the duration of the monitoring project. At this stage, the project's duration is expected to occur over a number of months, not indefinitely. The Department of Environment and Heritage Protection (EHP) apologises that you consider this inadequate, however EHP is relying on the state's technical experts from the Department of Science, Information Technological and Innovation (DSITI) in terms of ensuring appropriate methodologies for the project. As you are aware from EHP's previous correspondence, DSITI is managing the project and will ensure that monitoring occurs during the expected "worst meteorological conditions" to establish whether there is an issue with particulate matter emissions from the quarries in the Yatala area. The results of this project will be reviewed by technical experts from DSITI to determine whether any additional monitoring is required based on the evidence collected.

Your comments in regards to the Protocol for Environmental Management: Mining and Extractive Industries from the Victorian EPA will be provided to DSITI for its consideration in respect to the project.

It should also be noted that the air monitoring stations at Springwood, Woolloongabba and many other locations in Queensland are not managed by EHP. These air quality monitoring stations fall under the portfolio of DSITI.

Should you have any further enquiries, please contact Rebecca Small, Principal Environmental Officer, Environmental Services and Regulation of EHP on telephone 5583 2147.

Yours sincerely

**Subject:** Yatala Residents Alliance (YRA) Response 16th June 2016 to Letter received from Hon Dr Steven Miles MP on the 8th of June 2016

Date: 16<sup>th</sup> June 2016 – 5.38pm

Dear Hon Dr Steven Miles MP – Minister for Environment and Heritage Protection and Minister for National Parks and the Great Barrier Reef,

Once again I thank you for taking the time to reply to the concerns raised by the Yatala Residents Alliance ( 6) Personal in the opportunity to speak with you at the Gold Coast Community Cabinet Meeting held on the 15<sup>th</sup> of May 2016. Your letter of the 8<sup>th</sup> of June 2016 was acknowledged on the 9<sup>th</sup> of June 2016, noting that YRA would reply.

YRA has replied today (see attached with all 10 of the specifically noted attachments that are referenced in our letter dated today - 16<sup>th</sup> June 2016) and we ask for an acknowledgement that this communication and all its attachments (10 in total) have been received and can be accessed in their entirety. We will also send a certified copy fully signed original of the communication to your office.

**Dr Miles, please note that our database of all YRA members has also been copied in on this email, as well as the seven persons of authority as named as recipients of a copy on the letter.** It will also be noted on the [www.yatala.info](http://www.yatala.info) website for the general access for the wider community.

**This email represents us ALL!** It is our effort for REAL honesty from those in authority whom are responsible for the environment within which we operate our daily lives – be that at home, at school or at work. We ask that you (and those whom are also copied in on this communication) be kind enough to evaluate carefully our reply to you and your team, as our response to you is heartfelt and full of the concern we all face from recalcitrant business operators in the area. (We would suspect that is true of many others whom are in other areas of Queensland and other states of Australia - they are just stretching the rules that authorities have given them and that is so sad, as they make it difficult for others coming behind them?). It is really time to apply compliance to the rules AND / IF those rules are not valid in this day and age – change them

so everyone has a chance to flourish!

This is a great place to live and work so we welcome those business operators to the Yatala Enterprise Area (YEA) whom really want to be part of our entire community and be good neighbours. It is not TOO HARD to abide by the RIGHT rules – we all have to do that (or maybe some of us do and others have been allowed to much leeway to avoid their responsibility!).

Yours truly,

ip4( 6) Personal infor – YRA Committee Member

sch4p4( 6) Personal informat

Yatala Residents Alliance Committee  
PO Box 445  
BEENLEIGH QLD 4207

Dear sch4p4( 6) Personal info

Thank you for raising community concerns in relation to air quality in Yatala and surrounding locations at the Gold Coast Community Cabinet held on 15 May 2016.

I have asked officers of the Department of Environment and Heritage Protection (EHP) to respond to the concerns raised in your submission and further correspondence dated 19 May 2016. Expert air quality advice has also been sought from the Department of Science, Information Technology and Innovation (DSITI) in responding to your concerns.

Odours observed within the community

I note your concern that odour from composting operations is causing a nuisance in the Yatala area. In addition to the composting facility that you refer to, a number of other activities regulated by the state and local government are located within the Yatala area. I am informed that EHP has continued to investigate odour complaints it receives through its Pollution Hotline and takes compliance action where it is able to obtain evidence of non-compliance. In the event that evidence of non-compliance with legislation is obtained in relation to activities authorised by EHP, enforcement action has and will continue to be taken in line with EHP's published enforcement guidelines.

To enable EHP to respond to community concerns and obtain the necessary evidence to take enforcement action, I would encourage you and your members to report all alleged nuisance through EHP's Pollution Hotline at the time that you are being impacted. Pollution incidents can be reported 24 hours a day, 7 days a week by phoning 1300 130 372.

### Concerns regarding Bio-Aerosols

In response to your previous concerns raised by YRA regarding the potential for bio-aerosol risks within the community, EHP instigated a bio-aerosol monitoring program in November 2015. A technical report has been provided to DSITI, which is currently in the process of compiling a report of the outcomes of the study for communication with the YRA and the public. The report is expected to be provided to EHP by the end of June 2016, however a preliminary review of the results show that compost associated bio-aerosol levels within close proximity to the alleged source were well below recommended exposure levels. I note your request that the Queensland Government take regular air samples of bio-aerosol levels. Following review of the report, a risk based approach will be used to determine if further sampling is required. This will be assessed in consultation with the expert advice obtained from DSITI and will be based on the results of the monitoring program undertaken to date.

### Dust monitoring

Your submission refers to the need for urgent dust monitoring. As you would be aware, EHP has instigated continuous monitoring within the area at Luscombe. Results of continuous particulate monitoring are reported on the Queensland Government's open data website and available at <[www.data.qld.gov.au/dataset/air-quality-monitoring-2015](http://www.data.qld.gov.au/dataset/air-quality-monitoring-2015)>. To view the relevant hourly air monitoring results for 2015, please click on the link for 'Luscombe (South East Queensland)'. At this point in time, no levels recorded have exceeded human health 24-hour standards for the particulate matter.

In addition to continuous particulate monitoring, respirable crystalline silica samples are also being collected and analysed. This was as a result of the request from the Yatala community. Human health standards for respirable crystalline silica are based on an annual average. For this reason, compliance with standards cannot be reported until such time as a full 12 months of monitoring is completed. Expert air quality advice from DSITI indicates that the results received to date have been at or below the detection limit of monitoring equipment. As such, I have been advised that while these results are indicative only, it is highly likely that the final results will be well below standard exposure levels.

To obtain sufficient results to enable a full analysis against human health standards, dust monitoring is expected to continue until the end of September 2016. Once final results are obtained, DSITI will compile a report on the monitoring program. A copy of this report will also be made available to YRA and the public.

I note your request that the Queensland Government ensure that permanent dust monitoring is installed in your area. Expert advice will be sought from DSITI to assess the need for permanent monitoring based on the results obtained from the 12-month study. As air monitoring stations fall under the jurisdiction of DSITI and the portfolio responsibilities of the Honourable Leeanne Enoch MP, Minister for Innovation, Science and the Digital Economy and Minister for Small Business, a copy of your correspondence has been passed onto the Office of Minister Enoch with a request that a reply be forwarded to you at the earliest convenience.

### Local government planning scheme

Your submission makes a request in relation to industry designations in the current City Plan 2016. Please note that local government planning schemes fall within the portfolio responsibilities of the Honourable Jackie Trad MP, Deputy Premier, Minister for Infrastructure, Local Government and Planning and Minister for Trade and Investment. As such, a copy of your correspondence has been passed on to the Office of the Deputy Premier with a request that a reply be forwarded to you at the earliest convenience.

I trust this information is of assistance and I thank you for participating in the Community Cabinet process.

Yours sincerely

EHP RTI DL Release

## Air quality live data link. 22 May 2016

[http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category\\_id=1&mode=measurement&goto=Latest+hour](http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category_id=1&mode=measurement&goto=Latest+hour)

The screen shot of the table below shows air data for the 20<sup>th</sup> of May 2016 between 7:00 am – 8:00 am. Obviously all the particles in the columns below can be detrimental to human health if they are present in excessive levels, that is why they are being monitored.

We are particularly interested in the Column titled “Particle PM 2.5 (24hr av)(ug/m<sup>3</sup>)”

PM<sub>2.5</sub> means particles with a mean aerodynamic diameter less than 2.5 microns, this further means particle less than two and a half millionths of a metre in size. Particles which are so small can be absorbed deep into our lungs and can in excessive volumes and over long periods of exposure cause damage to our respiratory system/i.e. our lungs. As we understand it the EPP (AIR)2008 guideline for PM 2.5 is 25 ug/m<sup>3</sup>, this mean 25 millionths of a gram per cubic metre.

# Northern Gold Coast **Seniors Expo**

\*Gold Coast Sun July 22, 2015\*

## Asbestos victims honoured at memorial service

**LOCAL** residents came together earlier this month at an inaugural asbestos memorial service to pay tribute to men and women who have died as a result of asbestos exposure.

Asbestosis & Mesothelioma Association of Australia secretary Nick Bos said the association was proud to host the first asbestos service for the region to honour victims of asbestos-related diseases and to indirectly promote asbestos awareness and safer building behaviours on the Gold Coast, Tweed and Northern Rivers regions.

"Our members spent much of their lives in the 1950s-1980s working hard to support their families in various industries including building, construction, defence and manufacturing, during which time they were exposed to asbestos," he said.

"At that time, the dangers of asbestos were not known to workers or their families.

"As a result, many of these men and women developed asbestos-related diseases, including asbestos-related cancers such as lung cancer and mesothelioma.

"Even more heart breaking is that many family members have also developed asbestos-related diseases from washing their loved one's work clothes.

"Many innocent lives have been lost to asbestos and the service was an important opportunity to come together and honour them.

"Our message to the community is to always seek professional advice when renovating or working with suspected asbestos-containing materials - there is no safe level of asbestos exposure and inhaling even one asbestos fibre can be enough to cause a person to develop an asbestos related cancer."

Subject: Fwd: QUARRY LINE (COMPLAINTS FORM) [#43]

For your information.

Community awareness about the rising dust levels over the last 6 months is increasing as is the health concerns about the release of silica and asbestos in the local rock being quarried. The quarries have themselves admitted that silica and asbestos is contained in the local rock yet there is no continuous/permanent monitoring being carried out by the authorities. The situation is becoming quite disturbing. Agitation is growing to hold a public meeting and to highlight the issues via the media. There is ample ongoing evidence available to show that little appears to be happening to reign in the recalcitrant operators who mouth on about trust and "their responsibilities" but don't actually do anything about it. For example, in 2010 [REDACTED] made public promises that it would cover its crusher to stop the dust. To date nothing has been done - in fact it appears that [REDACTED] have added additional mobile crushers to its quarrying capacity (all of which are uncontrolled). More and more of the community are starting to complain and the eventual fallout will not be pretty if solutions are not found soon.

**Additional Information – More detail about the incident**

The dust level for this whole week has been very high as the winds were calm. We are less than 700 meters from the quarry. Our home is covered in fine dust continually, even though we close things up all the time... our office desk has to be wiped every day. We realize that the mine has a right to operate, no worries there however, the level of dust rising from the mine site appears to be greater than what we have noticed in the past 5 months that we have lived here. Our understanding when we purchased this property was that the mine was under an obligation to suppress dust as much as reasonable.

Please advise... [REDACTED]

Subject: Fwd: QUARRY LINE (COMPLAINTS FORM) [#44]

This information is with the authorities listed above.

FYI

The chorus of complaints is set to rise as more and more people living in close proximity to the quarries realise that authorities are doing very little to ensure that recalcitrant commercial concerns are adhering to the controls they themselves signed up to. The amount of dust is not the only problem. Its also about what is contained in the excessive dust - namely silica, asbestos and dangerous bioaerosols. Eventually the matter will come to an unfortunate head when people in the local area realise they and their neighbours are falling sick. The history of complaints over the last 4 years is testimony to the fact that the dust issue is real and continuing despite the assurances of the authorities.

| Do you intend to or have you also lodged this complaint with the suspected quarry? * | No                                                                                                                   |

**Additional Information - More detail about the incident**

Why is the Quarry not forced to contain their dust?

On a daily bases when the quarry is working we can physically see a massive amount of dust in the air. We are a very fit and healthy family but since the wind has changed direction lately the dust has been blowing our way and we are all very ill because of it. Our cars are covered in a layer of dust each day and also the house inside and out.

While I am happy to deal with a little bit of dust around the house given our proximity to the quarry, I am extremely concerned about health and very disappointed that the quarry is obviously not taking measures seriously enough to ensure the dust is confined.

It certainly must be the quarry's responsibility to ensure public safety and on every occasion, the product is watered down when extracted and/or handled as a simple measure so that dust is kept to a minimum.

We are positive and have No Doubt that the dust from the quarry is causing the illness as when we get out for the day we are all fine in other areas.

I am aware of the dust measuring devises used by the quarry as I have spoken directly to them about this issue. Although Holcium state these devises prove they are within specific guidelines in relation to dust escaping their property, they are obviously not listing to our first hand experience with the issue.

THIS IS A SERIOUS HEALTH ISSUE!

PS I selected NO on complaining direct to the Quarry as I have done so on numerous occasions and feel I am treated with contempt, and get nothing but Bullshit Lip Service.

| More detail about the incident INCLUDING a description of the smell e.g.: ash, smoky, garbage, lemon.                                            | The odour was similar to human or animal faeces. It's most likely rotting organic mass, but possibly the worst odour we've had to endure over the past 6 years. There was not much wind at all and the odour was constant. It was a case that I'm sitting in my home with every window closed as it's a disgusting smell! |

## 2012/2013 report for HANSON CONSTRUCTION MATERIALS PTY LTD, Hanson Wolffdene Quarry - Wolffdene, QLD

A list of Substances for an individual report.

| Substance                                    | Air Total (kg) <sup>[1][2]</sup> | Air Fugitive (kg) <sup>[1]</sup> | Air Point (kg) <sup>[1]</sup> | Land (kg) <sup>[1]</sup> | Water (kg) <sup>[1]</sup> | Total (kg) <sup>[1]</sup> |
|----------------------------------------------|----------------------------------|----------------------------------|-------------------------------|--------------------------|---------------------------|---------------------------|
| Carbon monoxide ⓘ                            | 28,000                           | 28,000                           |                               |                          |                           | 28,000                    |
| Oxides of Nitrogen ⓘ                         | 45,000                           | 45,000                           |                               |                          |                           | 45,000                    |
| Particulate Matter 10.0 um ⓘ                 | 35,000                           | 34,000                           | 430                           |                          |                           | 35,000                    |
| Particulate Matter 2.5 um ⓘ                  | 3,000                            | 3,000                            |                               |                          |                           | 3,000                     |
| Polycyclic aromatic hydrocarbons (B[a]Peq) ⓘ | 1.8                              | 1.8                              |                               |                          |                           | 1.8                       |
| Sulfur dioxide ⓘ                             | 2,000                            | 2,000                            |                               |                          |                           | 2,000                     |
| Total Volatile Organic Compounds ⓘ           | 4,800                            | 4,800                            |                               |                          |                           | 4,800                     |

[1] All emission/transfer quantities are displayed to two significant figures. Displayed emission totals may not exactly equal the sum of their individual emissions.

This extract from the National Pollution Inventory (NPI) shows Hanson reported they allowed 34,000 kg of PM10 dust and 3,000 kg of PM2.5 dust to escape from their quarry site in 2013. Hanson's application to expand their quarry acknowledges that laboratory analysis of a sample of rock from the quarry contained 37% silica. The local community have been collecting samples from all the quarries in the Darlington Range and Hanson's figures show that this is not an unusual amount of silica for this area. What is extremely concerning is that on these figures (accepted by Hanson themselves), over a third of all dust coming from Hanson's quarry is silica. While we believe Hanson's reporting to the NPI is very conservative, they are effectively admitting to releasing into the surrounding community and environment around 12,000 kg of silica dust fine enough to be breathed in and embedded deep in people's lungs.

The documents pertaining to the Hanson quarry application for expansion can be found here:

The Honourable Dr Steven Miles MP  
Minister for Environment and Heritage Protection and Minister for National Parks and the Great Barrier Reef  
GPO Box 2454  
Brisbane  
Queensland 4001

16<sup>th</sup> June 2016

Email: [environment@ministerial.qld.gov.au](mailto:environment@ministerial.qld.gov.au) [Mount.Coot-tha@parliament.qld.gov.au](mailto:Mount.Coot-tha@parliament.qld.gov.au)

Ref: CTS 12238/16 Letter to YRA from Dr Miles dated 8 June 2016

Dear Dr Miles,

Thank you for your letter and the time you have spent considering and investigating our concerns.

If we may detract momentarily before we address your reply, we would like to draw your attention to the attached Newspaper article titled "Asbestos article July 2015" and the following information that we obtained in regard to dust emissions from 2 of our local quarries for the years 2012-2013. It is disturbing to note that Hanson, in their recent application to expand their operations, publicly acknowledged that the rock found at their quarrying area (which is also found throughout the Darlington Range) contains 3% asbestos and 37 % crystalline silica.

This information was obtained from the QDOS Facebook page showing extracts from **the National Pollutant inventory**.  
**Refer attachment titled "Hanson's Silica Dust Output PDF"**

Holcim quarry 2012-2013 dust emissions  
PM10 dust 110,000kg  
PM2.5 dust 4,200kg

Hanson quarry 2012-2013 dust emissions  
PM10 dust 35,000kg  
PM2.5 dust 3,000kg

**Therefore the total dust emissions from these two quarries alone = 152,000 kg for that year**

Based on the makeup of the rock in the Darlington ranges (containing 3% asbestos and the 37 % crystalline silica) this in turn gives us:

$152,000 \times 37\% = 56,314$  kg of crystalline silica dust

$152,000 \times 3\% = 4,560$  kg of asbestos dust

The asbestos dust fibres, which to our understanding are the most dangerous, are some 2 millionths' of a metre in length and are therefore in the PM2.5 range, so the potentially dangerous asbestos emissions from these two quarries equates to  $\Rightarrow 7,200\text{kg} \times 3\% = 216$  kg of potentially lethal asbestos fibres. We also believe that asbestos fibres smaller than 10 millionths' of a metre (**of which there are possibly some 4,560 kilograms released into our surrounding air**) if inhaled or ingested in drinking water, can also result in serious health complications.

**NOTE:** the above calculations only take into account two quarries in our area. The actual level from all four quarries could quite easily be double the above dust emissions considering those other quarries do their rock crushing in the open (**we are sure your staff will be able to verify our assumptions, as they will have the emissions for the 2015-2016 years readily available for all the quarries in our area**).

But trying to get a more accurate calculation seems pointless when you consider the newspaper article attached where it is stated that **inhaling one asbestos fibre alone can result in a person developing the form of lung cancer known as Mesothelioma.** The article also mentions that people handling/washing asbestos covered clothing of their spouses also contracted Mesothelioma. (*We suspect that those unfortunate family members were not subjected to constant dust levels containing asbestos fibres that we may be subjected to on a 24/7 basis*).

We will now address the matters raised in your response to YRA dated 8<sup>th</sup> June 2016. We ask that you and your team plus the other State Government Ministers and their Departments, as well as any other controlling authority responsible for areas associated with Business Approvals, Compliance Matters, Health and Safety take the time to closely evaluate our response to your letter of the 8<sup>th</sup> of June 2016.

Dr Miles, the community is not arguing against local business development – we welcome it. **What we do ask is that, in particular, the State Government takes our concerns into careful consideration as a matter of urgency because the health of people who live and work in this area continues to be put at serious risk. It can NOT BE LIKE THIS if those in authority and those whom have, or want to have, a business in the area abide by the rules.**

#### **Asbestos Dust**

Dr Miles, the 3% asbestos content and the 37 % crystalline silica content of the rock in the Darlington Ranges is the very reason that we requested the DEHP, as a matter of urgency in December 2014, to carry out air quality tests and install live 24/7 air quality monitoring stations. We are extremely disappointed to find that there is absolutely no reference to asbestos in any of the investigations mentioned in your letter dated 8 June 2016.

As we have been anxiously waiting for this information for some 1 ½ years we request that the matter of asbestos emissions in our area is addressed and made known to us **immediately**. We would also be very much obliged if your experts could advise in writing how many million asbestos fibres there are in one gram of PM 10 and PM 2.5 asbestos dust. (*i.e. if the fibres are 2 microns in length how many million fibres would it take to achieve a mass of 1 gram*)?

#### **Crystalline Silica Dust**

As we understand it according to the Victorian EPA Protocol for environmental management: Mining and extractive industries, large mines or quarries greater than 500,000 tonnes/year extraction which are known to have silica in their rock must provide level-1 data over a 12 month period which consists Real time continuous 24-hour PM 10 and PM 2.5 data for a 12 month period, analysis of crystalline silica (PM 2.5 fraction) and heavy metal content (PM 10) where applicable.

Because we believe that 4 large quarries in our area (**one of the quarries alone has been described as one of the largest in Queensland**) process some 6 or more times the volume specified above i.e. >3 million tonnes and because we believe that most of the rock crushing is done in the open **and in particular because we have been informed** that the rock analysis from one of the quarries revealed that it was 37% silica and 3% asbestos, we requested in December 2014 that DEHP carry out similar tests in the Yatala and Ormeau region.

We also requested that similar 24 hour live monitoring stations as per **DEHP's link**:

[http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category\\_id=1&mode=measurement&goto=Latest+hour](http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category_id=1&mode=measurement&goto=Latest+hour)

are installed in our area with the data available 24/7 to any resident who wants to check.

We are again extremely disappointed to find in the link provided in your letter [www.data.qld.gov.au/dataset/air-quality-monitoring-2015](http://www.data.qld.gov.au/dataset/air-quality-monitoring-2015) an excel spreadsheet which only contains dust data from 14:00pm 2/9/2015 until 23:00pm 31/12/2015. This is only 4 months of data recording and well short of the 12 months required for a much smaller operation. Dr Miles, when we first opened the spreadsheet we found it to be unreadable in that the first 66% was blank and the columns had to be widened in order to be able to read the data. We amended the worksheet titled it "*Luscombe-aq-2015 saved for YRA ref 8 June 2016 rev-1.pdf*" and provided it as an attachment for your reference. We were not aware and still do not know exactly where in Luscombe the dust monitor was located. You will by now know that we have several quarries in our immediate vicinity and as such we would have expected some dust monitors being located in the **inhabited downwind areas of Yatala and Ormeau** in order for the monitors to truly measure the cumulative dust from all the quarries.

Your DEHP officers will be well acquainted with our area and know, that due to the topography, the odours we have been subjected to for over 6 years can be very directional under various wind conditions and directions, in that one street at any one time can experience very objectionable odours whereas another street only a short distance away will not be affected at all. **Based on this observation** we find it hard to imagine how a monitor located in some remote uninhabited area can represent actual dust levels from various quarries experienced by downwind residences in Yatala and Ormeau which themselves will experience different levels depending if the winds are from the East or from the West. How can we be expected to believe that **ONE MONITOR IN LUSCOMBE**, as shown from the data provided to have been used in this case, can represent dust levels in very different locations (Ormeau and Yatala) either of which will experience much higher levels when the wind is blowing in their direction?

- We ask that your experts confirm in writing that the selected dust monitoring site used to generate the 4 month excel data, is truly representative of the cumulative dust levels that Yatala and Ormeau residents downwind from the quarries have to breathe 24/7. For instance, please refer to the attached file titled "**Quarry dust complaint 44**", do the readings recorded over a 4 month period at the monitoring location in Luscombe represent the actual dust levels being experienced by Ormeau residents in Vennor Drive and nearby streets?
- If this guarantee cannot be given, we request that several monitors are promptly located in downwind locations of Yatala and Ormeau and that the tests are repeated immediately over a 12 month period and that all data is available online immediately for easy and ready access to all residents and quarries from the first day of their operation and not after a further 12 month delay.

#### **Bio-aerosol Monitoring**

Dr Miles, your letter informed us that a compost associated bio-aerosol monitoring program was carried out in November 2015. We draw to your attention a recent complaint from a resident in Tristan Court, Ormeau, and **(submitted 6 June 2016)**. Please be aware that the residents in that location have been complaining to the Gold Coast City Council, DEHP and to their State member for years about dust **(and amongst other things metal projectiles breaking their roof tiles or landing dangerously close to residents in their backyards, from mulching machinery parts or metal mixed in with the green waste)** from a large green waste shredding operation just some 100 metres away from them. You will note that we have made a mention of that operation in our original request for monitoring. Two recent complaints are provided in the attachments and are labelled "*Dust complaint 583*" and "*Dust complaint 581*" **(further evidence can be forwarded to yourself upon request; some of this has also been emailed more recently to the pollution hotline)**

As we have mentioned in our earlier correspondence and provided links to overseas tests, *bio-aerosol emissions from green waste shredding are considerably higher than from compost turning*. We sincerely hope that DSITI have in fact carried out tests downwind of that site's emissions as those unfortunate Tristan Court, Ormeau residents are up to their ears in it, without anyone from any level of government thus far stepping forward and putting an end to this gross injustice.

As you can appreciate 100 metres separation from an *Aspergillus fumigatus* generating source is not a safe distance for residents, particularly if they are elderly or if they have a pre-existing condition such as asthma or if they are young children.

- Dr Miles, we ask that you instruct your experts to ensure that adequate bio-aerosol level tests have been carried out in the conditions that the Tristan Court, Ormeau residents are constantly subjected to. If not, we request that these tests are carried out immediately and that appropriate action is taken by DEHP AND/OR Gold Coast City Council to have this farcical situation discontinued immediately. Residents should not be imprisoned within their homes because of the continuously dangerous conditions being created by inappropriate industrial activities which, for whatever reason, have been and are being allowed far too close to residential areas!

#### **Odours observed within the community**

Dr Miles, we note and are familiar with the suggestion in your reply in regard to the procedure for reporting odours. With all due respect, we again re-emphasise that this has not worked successfully in Yatala.

You or your staff only need to Google the area as it stands currently (and has stood for the past 8-10 years) in order to realise that there **is only one huge outdoor windrow composting** site, upwind and directly across the road from residences, capable of producing those odours. This site, despite hundreds of complaints since and possibly before 2010, has been allowed to continue to generate and get away with offensive odours. In fact, when it applied for an expansion of its composting operation and also submitted a MCU for additional ERA's, one of which was a Bio-mass burning green-waste electricity generating plant, all were approved by the Planning and Environment Court on the 7<sup>th</sup> of May 2014. This was despite the Gold Coast City Council unanimously rejecting the application and despite 3 residents who lived directly opposite the site and the many other residents surrounding the site, submitting objections to the MCU about the then current odour emissions. After hundreds more complaints since the Court approval of the MCU, the DEHP finally observed offensive odours in the immediate vicinity and the Planning and Environment Court issued a strict EPO on the 8<sup>th</sup> of April 2015 which included hefty fines and the bringing forward the construction of an enclosure for housing the initial compost mixing and decomposition. **This sealed enclosure was the basis of the original MCU court approval** and was to be negatively aerated and fitted with a bio-filter to minimise harmful emissions of bacteria, mould spores/Aspergillus Fumigatus and other potentially harmful bio-aerosols and was to be completed by 31 January 2016.

However, "sorry for this, but this unfortunate saga continues"! Because of the way the conditions in the court order were presented DEHP have informed YRA that this enabled the offending company to not construct the sealed enclosure complete with bio-filter and as anyone would logically expect, the odours and complaints once again emerged.

Although the odours have once again abated, perhaps due to the vehement complaints and perhaps due to the fact that the wind direction at this time of the year is in the opposite direction, the fact of the matter remains that the original condition of the Court's MCU appeal approval was that the sealed enclosure which includes a bio-filter and based on which it was claimed that the odour emissions would be reduced by 50%, the enclosure construction was to commence by the 7<sup>th</sup> of May 2016 (2years from the judgement date) **This date has since passed!**

- Minister we ask that you instruct the relevant officers in your department to ensure that the court conditions are observed to the letter. Please understand that our community will not tolerate any further delays to the construction of **the promised** sealed enclosure complete with bio-filter as originally approved by the Planning and Environment Court, as it at least promised a halving of the odour intensity and minimisation of harmful bacteria/spores etc. / etc...

Please forgive us if we seem irreverent, but you may by now appreciate that we are fully conversant with the complaints system and its gross inadequacies, which we hope you will address.

#### **24/7 Air quality monitoring**

Dr Miles please refer to the attachment labelled "*Air pollution today 22 May 2016 from DEHP live monitor.pdf*"

Air quality live data link.

[http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category\\_id=1&mode=measurement&goto=Latest+hour](http://www.ehp.qld.gov.au/air/data/search.php?day=20&month=05&year=2016&hour=08&category_id=1&mode=measurement&goto=Latest+hour)

Please note that we mean no disrespect by going into the details below as we are very much aware that you understand the terminology, however some of your staff, other Ministers and their teams and some of our residents, may not be so well informed, so the detail is for their benefit.

The screen shot of the table shows air quality data for the **20<sup>th</sup> of May 2016 between 7:00 am – 8:00 am**. Obviously all the particles in the columns below can be detrimental to human health if they are present in excessive levels. That is why they are being monitored.

We are particularly interested in the Column titled "Particle PM 2.5 (24hr av) (ug/m<sup>3</sup>)"

PM<sub>2.5</sub> means particles with a mean aerodynamic diameter less than 2.5 microns and this further means particles less than two and a half millionth of a metre in size. Particles which are so small can be absorbed deep into our lungs and can in excessive volumes and over long periods of exposure cause serious damage to our respiratory system/i.e. our lungs. As we understand it the EPP (AIR) 2008 guideline for PM 2.5 is 25ug/m<sup>3</sup>, this mean 25 millionths of a gram per cubic metre. **However note:** if the PM<sub>2.5</sub> dust contains silica more precisely known as respirable crystalline silica (defined as PM 2.5 fraction) then that dust is considered far more harmful to human health and the acceptable level for continuous human exposure is 3ug/m<sup>3</sup> Annual average.

The tables and data in this link provided are to our untrained eyes absolutely top class, **and we will settle for nothing less**. Note: anyone can enter any past time and date and obtain instantly the air quality for all the monitoring sites in Queensland on that particular year-month-date and time. For example the data in the screenshot shows that the PM 2.5 dust pollution levels at that time in Cannon Hill 27.1 ug/m<sup>3</sup> are higher than levels in nearby suburbs such as Wynnum West which at that time is only 12.6 ug/m<sup>3</sup>.

We consider this will make it difficult for anyone to exceed their permitted emissions without immediately appearing on the radar, and more importantly the health of the residents in downwind and surrounding areas will be protected 24/7.

We are well aware that the live data in those tables does not show respirable crystalline silica levels or asbestos levels, however a high reading (such as the 27.1 ug/m<sup>3</sup> in the table provided in the screen shot for Cannon Hill) if it were at a residence adjacent to and downwind from a quarry in Yatala or Ormeau would indicate that high levels of crystalline silica are contained in that dust and that proportionately high levels of asbestos fibres are also in that dust.

Additionally as Yatala and Ormeau residences will be downwind from the emissions of many hundreds of new industries there is a very real prospect for our air quality to deteriorate significantly from companies who do not comply with their approval conditions either purposely or unknowingly if their equipment is malfunctioning, or even from complying companies simply because of the sheer volume of industries which will be concentrated so close to our residential areas. **The live air quality monitoring stations that we are requesting of which there should be at least 2 (one in Ormeau and one in Yatala)** need to monitor all the listed pollutants and not just dust and will be a clear signal to all would be polluters that they may not “crop dust the Northern region of the Gold Coast”.

With all due respect, please do not reply to our letter and live monitoring request in the manner (**of your predecessors**) that all future development applications will be treated on their merit and that all will have to comply with stringent regulations and limits OR that it is up to Gold Coast City Council to make the final decision “as we all know by now that it is not the case”. It has very clearly been demonstrated by the amount of grief caused to our residents over many years that the authorities, be they the DEHP and/or Gold Coast City Council, have not been successful and cannot ensure the compliance of two businesses which produce excessive obvious obnoxious odours and visible dust pollution. Therefore it is not unexpected that YRA feels those authorities are currently in no position to control hundreds more possible polluters when, and if, they are all concentrated in one area without the help of live monitoring stations. These need to be installed **now** so that a readily recognisable reference point is established.

Yours Truly,

4p4( 6) Personal infor

YRA Committee Member

**Subject:** RE: Asbestos Monitoring

Dear Sam,

Many thanks for the email below.

By way of an answer to you today, I confirm that your email has been sent to **ALL YRA MEMBERS** for their individual evaluation. Should they feel they would like to put their name / family residential address / phone and email details forward to DEHP for a Monitor to be installed to conduct asbestos sampling, we are asking them to reply to YRA in that regard. A YRA Committee Member will inform you of their contact details for your evaluation of the location of the property.

### **TO ALL YRA MEMBERS**

Please read the email below carefully and should you be prepared to take the time required and have your property participate as a Monitor Site for Asbestos, please **REPLY to:** [yra@yatala.info](mailto:yra@yatala.info) **ASAP**. Name / Address / Phone Number / Email is required for YRA to pass on the DEHP.

Best regards,

4p4( 6) Personal infor YRA Database Coordinator / YRA Committee Member

**Subject:** RE: Asbestos Monitoring

Dear sch4p4( 6) Personal information

As you have been no doubt made aware, the Department of Environment and Heritage Protection (EHP) are seeking community volunteers to participate in the asbestos monitoring to be conducted as part of the Crystalline Silica Investigation being coordinated by the Department of Science, Information Technology and Innovation (DSITI).

EHP are seeking 3-6 suitable residents to volunteer with the asbestos monitoring at their private residence(s). Ideally, these residents need to be located in the areas that are considered to be worst affected by quarry dust during increased levels of dust to help determine the community's potential health risk.

The volunteers must be deemed suitable by EHP / DSITI to participate in the monitoring to ensure that monitoring is conducted in an objective manner. As such, any person with a prior record of lodging vexatious complaints or those individuals deemed to have a conflict of interest will not be deemed suitable.

The volunteers will be provided training by EHP officers in the use of asbestos samplers and then left in charge of a sampler for deployment. The volunteer will be required to deploy the sampler for approximately 8 hours during an occasion that they deem to be heavily impacted by dust from an adjacent quarry. Following sample collection, a DSITI or EHP officer will collect the sample from the volunteer for analysis. Please note that the equipment is specifically for monitoring potential health impacts from quarry dust, not other industries or development sites and as such the location of the volunteer needs to be away from other potential sources of dust such as development sites.

We thank you for your offer to assist in the investigation and welcome your suggestions for community volunteers who wish to participate in the asbestos sampling. Please respond to this email with the names, locations and contact details of residents who wish to participate at your earliest convenience. EHP would also welcome any suggestions of nuisance sensitive locations (e.g. private residence(s) / businesses / schools) that the YRA believe to be an area that is worse affected by quarry dust. Where a suitable volunteer cannot be utilised at this location, EHP officers will conduct the sampling.

Looking forward to your response.

Kind regards

**Sam Spence (I work part time, 9.15am to 2.15pm 9 days/fortnight)**

**CC:** 'yra@yatala.info'

**Subject:** Crystalline Silica Dust investigation

Dear 4( 6) Personal inf

Thank you for your continued assistance with collating volunteers for the asbestos monitoring being conducted as part of the DSITI crystalline silica dust investigation. At this stage, we would like to deploy an asbestos monitoring device to the following locations, some of which have several suitable volunteers. The equipment setup is somewhat technical and therefore the volunteer would need to be comfortable with following very specific instructions. Could you please review the following list and for group 1., 2. And 3. decide who within each numbered location would be most suitable. In addition to the below locations, EHP officers will also be conducting some asbestos monitoring in areas where a resident is not available at locations of interest.

1. sch4p4( 6) Personal information (already provided with equipment but EHP happy for additional sampling to occur at this location).
2. sch4p4( 6) Personal information
3. sch4p4( 6) Personal information
4. sch4p4( 6) Personal information
5. sch4p4( 6) Personal information

If possible we would like to visit the 5 selected volunteers this Wednesday if at all possible?

Kind regards,

Zoe

**Subject:** YRA's response to DEHP (ESR) in support of sch4p4( 6) Personal inform; dust complaints CR74076 and CR74467  
**Attachments:** Wind Friday 26 August 2016 rev-1.pdf; luscombe-aq-2015 saved for YRA ref 8 June 2016 rev-1.pdf

To: Gold Coast ESR

Dear Mr Brett Glosko and Ms Sam Spence,

YRA refers to an email dated 8 August 2016 from South Queensland Compliance to sch4p4( 6) Personal informatic relating to Complaints numbered CR74076 and CR74467. sch4p4( 6) Personal inform has provided YRA with a copy of that email.

We are not aware of the exact detail of these complaints as they were not posted on the Community Watch (air complaints) site —sch4p4( 6) Personal inform has advised YRA that he made these complaints direct to DEHP.

YRA does however note in your email, that sch4p4( 6) Personal inform report of the wind direction was questioned due to the wind direction recorded at the Gold Coast Seaway at 13:11 12/7/2016 and as a result your department was of the opinion that it was unlikely that sch4p4( 6) Personal inform would have been affected by any of the emissions.

We are aware that there are times when clarity of correspondence from sch4p4( 6) Personal inform can be a possible issue BUT because we have always found him to be truthful, we have taken the time to look into the answer DEHP provided to sch4p4( 6) Personal inform particularly as we found it strange that the wind direction at the **Gold Coast Seaway** was being used as a reference for the wind directions in the Ormeau/Yatala areas.

With all due respect, we suspect that DEHP may be wrong in using the Gold Coast Seaway wind direction as a reference for our region and present the attached files “ Wind Friday 26 August 2016 rev-1” and” Luscombe-aq-2015 saved for yra ref 8 June 2016 rev-1.pdf” to illustrate from historical data, that wind directions in Yatala and the Gold Coast and Springwood are not always the same.

We therefore suggest that sch4p4( 6) Personal inform may well be correct and that since DEHP have several monitors currently in place monitoring 24/7 data for the January to December 2016 (**as we have been led to believe**) period, that these monitors are checked instead, to reveal the actual wind direction at 13:11 on the 12/7/2016.

As a side issue, we are aware that sch4p4( 6) Personal inform was advised by your department in writing on the 18<sup>th</sup> of August 2016, that Holcim Quarry had been issued with a formal warning on the 6<sup>th</sup> of July 2016 for a Breach of Section 430(3) of the Environmental Protection Act, resulting in a range of measures to be implemented to curb the dust emissions and yet some 6 days later (12<sup>th</sup> of July 2016), sch4p4( 6) Personal inform reporting of another dust event is being questioned and apparently dismissed! Again we suggest that the current DEHP/DSITI 24/7 monitors which we believe are in our area, are checked for any possible excessive dust violations at that particular time.

As a further side issue, we advise that if the corrective dust suppression measures as outlined in your email on the 8<sup>th</sup> of August 2016 were in use during that mid July 2016 period, how would it then be possible for a resident of Vennor Drive sch4p4( 6) Personal information to advise one of our YRA Committee Members during a telephone conversation on the 11<sup>th</sup> of July that at 17:38 that the dust was so bad that they were finding it hard to breathe, while they were on the phone - they took a photo. (email and photo can be made available upon request subject to that residents permission).

**INTERESTING OBSERVATION:** While trawling through past emails, we found it quite surprising that despite DEHP being aware of the Vennor Drive residents' dust issues for a considerable period of time, that the only warning to a quarry (**that we are aware of**) issued by DEHP on the 6<sup>th</sup> of July 2016 happens to coincide with the date of the photograph of dust taken by a resident on that same day and which was used in our letter to Minister Miles on the 13<sup>th</sup> of July 2016.

We would be very much obliged if you could provide a reply either in support of all our observations and attachments OR an explanation as to how our observations and attachments are incorrect.

**Please note:** The YRA committee are very much aware of the importance of our quarries to our State of Queensland and Country's continued development and to our State's coffers, however that does not mean that residents living adjacent to quarries have to be considered as acceptable collateral damage. We feel that rather than accepting the quarries word that all the correct practices are being observed, DEHP should actually do random and unannounced checks to ensure that **ALL** required practices are being adhered to. Additionally it would not hurt to share your findings with the community at large.

We don't want to be told that all is good by the quarries! We want that assurance from our DEHP and we want our DEHP to realise that any assurance they give us, will be carefully scrutinised and challenged to the full extent of the law. If we find that the "Duty of Care" that the DEHP and our elected representatives are entrusted with, is not being fully exercised, we will seek legal avenues to make all concerned accountable. **Our health is important to us AND it should be important to all our authorities and elected representatives – please show us that respect!**

Regards

| 1.0 pm  | WNW                 | 8.9                         | WSW                     | 7.2              | E                              | 19.8                              |
| 4.0 pm  | E                   | 6.5                         | ESE                     | 4.3              | SE                             | 20.4                              |
| 7.0 pm  | SE                  | 8.7                         | SE                      | 11.5             | SSE                            | 17.2                              |
| 10.0pm  | S                   | 10.7                        | SSE                     | 13.1             | SSE                            | 18.5                              |

It is noted from the above table that the Yatala wind direction is not the same as Biggera Waters which was chosen as it is closest to the Gold Coast Sea way, therefore we do not believe that DEHP should be using the wind direction as recorded at the Gold Coast Seaway as a reference point for wind direction reported in Yatala or Ormeau at any particular time.

To further illustrate our reasoning we refer to the file titled “Luscombe-aq-2015 saved for YRA ref 8 June 2016 rev-1.pdf” as additionally provided in the email with this word document, this DEHP/DSITI spreadsheet shows hourly data over 3 months as recorded by a DEHP/DSITI monitoring station located somewhere in Luscombe, in the Yatala/Ormeau region. We compared some of this recorded wind direction data to the historical data available for the Gold Coast Seaway in the screen shot below and have observed that the wind directions for the 2 locations are NOT the same. We therefore respectfully advise that the Gold Coast wind direction should not be used as a reference when assessing dust or odour complaints made by Yatala or Ormeau residents as innocent sources may be suspected and responsible sources may go undetected.

The table below compares actual historical wind direction on the 3/9/2015 at Luscombe/Yatala/ Ormeau and the Gold Coast Seaway.

| TIME            | WIND DIRECTION<br>GOLD COAST SEAWAY<br>3 September 2015 | WIND DIRECTION IN<br>DEGREES AT<br>LUSCOMBE MONITOR<br>3 September 2015 | EQUIVALENT WIND<br>DIRECTION AT<br>LUSCOMBE MONITOR<br>3 September 2015 |

**From:** ESR - Gold Coast [GoldCoast.ES@ehp.qld.gov.au]

**Sent:** Thursday, 8 September 2016 9:26 AM

**To:** sch4p4( 6) Personal information

**CC:**

**Subject:** RE: CR74467 and CR74076

Dear sch4p4( 6) Personal information

I write you in response to your recent correspondence received on 29 August 2016 with respect to CR74467 and on 02 September 2016 regarding the placement of monitoring equipment; and correspondence received from the Yatala Residence Alliance on 07 September 2016 in regards to your complaint concerning blast fumes / odour on 12 July 2016 (CR74076).

With respect to CR74467, a complaint was lodged with the department's pollution hotline on 03 August 2016 in regards to dust emissions from the Holcim Beenleigh Quarry at 3pm. The complaint message forwarded to the Gold Coast Compliance centre stated *inter alia* that '*The wind was coming from the South West. Strong winds recorded today. Photos have already been provided to Brett Glosko in the past*'.

Correspondence received from you on 29 August 2016 has clarified that the initial advice provided was incorrect and that the wind direction was blowing from the quarry towards your premises (i.e. westerly). The BoM Logan City weather station confirms that the wind direction at 3pm on 3 August 2016 was westerly. As such, the department acknowledges that where Holcim's dust emission controls were insufficient at the time of the complaint, dust may have blown towards your residence and caused a nuisance. Holcim have advised the department of the dust mitigation measures used during the time of the complaint (as per previous correspondence). Whilst your photograph is acknowledged and depicts what appears to be a dust plume above the quarry operation area, it does not provide enough evidence to demonstrate that dust is leaving the quarry's boundary and traversing into your residence at concentrations that would cause nuisance. Furthermore, Holcim have provided advice to the department that the Coolfog system they utilise on site produces very fine water particles (fog) that encapsulates any dust at the point source; may appear to look like dust emissions from a distance. The department are awaiting further information regarding this system and the operator has agreed to place further information regarding the site's use of the Coolfog system on their website within the near future. The department have urgently requested monitoring data from DSITI for the equipment established in Vennor Drive, Ormeau to assist with the investigation of recent dust nuisance complaints and are still awaiting the delivery of this data set. Once provided, this data will be analysed to determine whether dust deposition or PM2.5 / PM10 levels were within the acceptable limits. As you have been advised, should evidence become available indicating that the EA limits have been exceeded, the department will investigate the matter further and where applicable, take enforcement action in accordance with the department's enforcement guidelines.

As you are aware from correspondence issued to you on 18 August 2016, in response to your and other resident's dust nuisance complaints, the department have requested a range of management and mitigation measures be implemented by the operator as follows :

- Installation of temporary wheel bath whilst a longer term solution is investigated;
- Increased use of street sweeper;
- High pressure water jet cleaning of the crushing plant;
- Investigation of options for the installation of visible dust monitoring equipment on site boundary to the east;
- Investigation into the use of automatic messaging from site's weather station to assist with operational decision making;
- Investigation and implementation of a dust suppression product to be applied to the site's entrance / exit route;
- Investigation into dust mitigation equipment at the site's crushing / screening facility to determine whether the existing equipment is effective in preventing the release of dust emissions generated during these activities; and

- Review of operating procedures for those operations with a high risk of dust generation (e.g. blasting, crushing, and other activities with the potential to liberate particulate matter), with reference to the conduct of those activities during westerly wind conditions (which may blow dust emissions towards the sensitive receptors located in Vennor Drive, Ormeau).

Whilst these measures may not be implemented immediately, the department anticipates improvements in the near future.

In response to the dust nuisance complaints that have been received by yourself and other resident in Vennor Drive, Ormeau, the department has requested that the operator implement a particulate monitoring program that specifically monitors the impact of dust deposition on the sensitive receptors located in the vicinity of Vennor Drive, Ormeau. The operator has additionally been requested to establish monitoring equipment to measure particulate matter with an aerodynamic diameter of less than 10 micrometre (mm) (PM10) suspended to determine the impacts of dust emissions from the quarry operations on the sensitive receptors located in the vicinity of Vennor Drive, Ormeau. The additional monitoring will assist in determining whether further dust mitigation measures are required aside from those mentioned above.

In terms of the placement of this equipment, an assessment must be made by an appropriately qualified person (i.e. an air quality specialist / scientist) in regards to the specific location of the equipment with regards to the location of point source / fugitive emissions, relevant Australian Standards for the monitoring procedure, and the prevailing meteorology of the area. The department have not yet been advised as to the location of the equipment for the abovementioned program.

With respect to CR74076, a complaint was lodged with the department's pollution hotline on 12 July 2016 in regards to fumes from blasting at the Holcim Beenleigh Quarry occurring that afternoon (13:11). Whilst the department is of the opinion that reasonable and practicable measures were taken by the operator to prevent any unreasonable interference with air quality objectives during the blast (stated below), the department has nonetheless urgently requested monitoring data from DSITI for the equipment established in Vennor Drive, Ormeau to assist with determining any impacts during the blast. The department are still awaiting the delivery of this data set, however where the data indicates that the EA limits have been exceeded, the department will investigate the matter further and where applicable, take enforcement action in accordance with the department's enforcement guidelines.

Mitigation measures taken by operator during blast:

- Monitoring of weather forecast was undertaken prior and on the day of blasting, particularly noting wind strength and wind direction to assess the likelihood of movement of any potential fume/odour.
- Water suppression of the blast area, this commences during the days prior. This water suppression is completed using our onsite water cart and cannon. The area of the blast was suppressed by water cannon prior to the initiation of the shot to assist in reducing dust generation from the blasting activities.
- All blasts at the Beenleigh Quarry are filmed to assist in monitoring blast performance including identification of any potential post blast fume. The video of the blast which occurred on Tuesday the 12th of July 2016 has been reviewed for the presence of blast fumes, particularly oxides of nitrogen (NOx) using the NOx rating Scale within the Queensland Guidance Note QGN 20 v3 – Management of Oxides of Nitrogen in Open Cut Blasting issued by the Queensland Mines Inspectorate and Explosives Inspectorate (2011). This guidance note can be viewed at [https://www.dnrm.qld.gov.au/\\_data/assets/pdf\\_file/0010/212500/qld-guidance-note-20-mgmt-oxides-nitrogen.pdf](https://www.dnrm.qld.gov.au/_data/assets/pdf_file/0010/212500/qld-guidance-note-20-mgmt-oxides-nitrogen.pdf). Review of the blast video has not identified any presence of NOx fumes (typically of reddish/orange colour) and as such blast fumes containing NOx are unlikely to have resulted from this blasting event.
- Air overpressure and vibration monitoring was also undertaken and reviewed for each blast to ensure compliance with the site's Environmental Authority conditions.
- The quarry operates a detailed development plan which takes into consideration seasonal weather. During winter and South-Westerly winds, the mid and lower quarry benches are operated.

- Upon request, a Holcim staff member will attend various locations within the local community during times of blasting to answer any questions. No request was received for this blast.
- Monthly review meetings occur between Holcim, Blasting Contractor and Drilling Contractor to review blast performance including environmental performance. EHP's concerns and correspondence were reviewed on the 21st July 2016.
- A voluntary Community Consultation Committee meets every 3 months. During these meetings environmental performance is reviewed and discussed. Members are provided with copies of our dust and vibration monitoring data for further communication to the community.
- SMS Community Blast Notification System to notify registered recipients of the expected blast time on the day of the blast.

I note that again there appears to be discrepancy with the wind direction recorded for the time of the alleged offence. The blast occurred at 13:11 on 12 July 2016. The BoM Logan City weather station (located 14.3km to the NE) recorded a SW wind direction at 3pm on 12 July 2016. The BoM Gold Coast Seaway station (located 22km to the east) recorded a NNW wind direction for 3pm on 12 July 2016. The North Maclean station operated by DSITI (located 23km to the west) recorded a NW (317 degrees) wind direction between 13:00-14:00. The DSITI Springwood station (located 21km to the northwest) recorded a westerly wind direction (272 degrees) during the same period. Unfortunately the department does not have immediate access to the metrological data being recorded by DSITI at Vennor Drive, however this data has been requested from DSITI for analysis. The department agrees with the YRA that the meteorological data at different stations show significant variation and in lieu of a closer station, the department will endeavour to utilise a combination of the abovementioned stations when investigating these complaints. It is understood from discussions with Holcim that the operator may look to install equipment onsite to establish more accurate meteorology which will be of great assistance when investigating dust / fume complaints.

As discussed above, without further evidence, it is difficult to determine whether an offence has occurred with respect to the emission of fumes / odours from the blast; however, once received from DISTI, the department will analyse the PM10 and PM2.5 dataset to determine whether the blast resulted in an increase in particulate matter, indicating whether additional contaminants (fume / odour) may also have been likely.

As advised previously, the most time effective way in which the operator can respond to dust / fume nuisance complaints is to contact them directly, enabling a representative to attend the nuisance sensitive location at short notice and respond to any concerns at the time of the matter. Holcim has requested that any concerns be raised with Holcim's Public Affairs and Chairperson, Ms Jackie Piddick on 14 (6) Personal info for immediate attention. In addition you may also lodge a nuisance complaint at any time to the departments pollution hotline on 1300 130 372.

Kind regards,

**Subject:** DUST MONITORING UPDATE

Dear YRA Members,

Please find in the attachment an update from DEHP as sent to one of our committee. Name and Address edited from the attached letter.

You will note that the results may be made available to YRA by the end of December.

Of interest is the comment that the Primary Monitoring Site is Harts Road, Luscombe – is this site going to be truly representative of the cumulative dust from all the quarries in the area? The attached image is for your reference.

A copy of this email is also sent to Mr Brett Glosko – DEHP.

Best regards,

EHP RTI DL Release

Department of  
Environment and  
Heritage Protection

9 September 2016

[Redacted]  
Yatala QLD 4207

Dear [Redacted]

### Re: Yatala area alleged dust nuisances

With regards to your previous enquiries to the Department of Environment and Heritage Protection (the department), I write to inform you of the positive measures which the department is taking in order to ensure best practice dust management continues within the quarries which are local to the Yatala and Ormeau suburbs. As requested, you are welcome to share this information with the Yatala Residents Alliance.

In conjunction with the Department of Science, Information Technology and Innovation (DSITI), the department has been proactively monitoring dust through the use of air monitoring equipment which has been set up in Yatala. The purpose of the monitoring is to determine both the levels of dust in the area and whether there is any crystalline silica present in the dust particles.

The primary monitoring site is at Harts Road in Luscombe, which provides continuous monitoring of particulate matter 10 micrometers or less in diameter ( $PM_{10}$ ) and particulate matter 2.5 micrometers or less in diameter ( $PM_{2.5}$ ), as well as total suspended particulates (TSP) and dust deposition monitoring. The samples are tested weekly and there is a MET ultrasonic weather station which measures wind speed, direction, rainfall, temperature and humidity. The department has also recently issued asbestos monitoring equipment to five (5) local residents who have also received training on how to take samples using the equipment.

This monitoring will enable the department to better characterise and understand the effects of dust in the Yatala area, in response to concerns from the community.

The department understands that the community have expressed concern about their health and the potential contents of the dust particulates. Human health standards for respirable crystalline silica are based on an annual average. For this reason compliance standards cannot be reported until such time as a full 12 months of monitoring is completed. Expert air quality advice from DSITI indicates that the results received to date have been at or below the detection limit. Results to date are significantly below the current recommended annual average exposure limit of three (3) micrograms per cubic metre ( $\mu g/m^3$ ). The highest result recorded so far is  $0.13 \mu g/m^3$ , with the majority of weekly results being below laboratory detection limits.

To enable a full analysis against human health standards, dust monitoring is expected to continue until the end of September 2016. Once final results are obtained from the laboratory, DSITI will compile a report by December 2016.

In addition, last year's results of continuous particulate monitoring are reported on the Queensland Government's Open Data website, which is available at [www.data.qld.gov.au/dataset/air-quality-monitoring-2015/](http://www.data.qld.gov.au/dataset/air-quality-monitoring-2015/). To view the relevant hourly air monitoring results for 2015, please click on the link for 'Luscombe (South East Queensland)'.

The local quarries have also expressed their willingness and enthusiasm to improve their ongoing communication with the residents and community groups of the Yatala/ Ormeau region to better manage the dissemination of information to the community. To facilitate this, the department encourages you to contact the sites directly to inform them of any nuisance you are facing. The details of the relevant contacts are as follows:

**Holcim (Australia) Pty Ltd**

Phil Dukes  
Quarry Manager - Beenleigh Quarry  
Phone: 0429 791 202  
Email: [phil.dukes@lafargeholcim.com](mailto:phil.dukes@lafargeholcim.com)

**Boral Resources Pty Ltd**

Liam Elsworth  
Quarry Manager- Ormeau Quarry  
Phone: 07 5546 6299 or 0401 894 236  
Email: [Liam.Elsworth@boral.com.au](mailto:Liam.Elsworth@boral.com.au)

**Hanson Construction Materials Pty Ltd**

Reno Fabretto  
Quarry Manager- Wolffdene Quarry  
Phone: 07 5549 7077 or (6) Personal in

Please be advised that your enquiries have now been finalised. In order to inspect and assess any future dust nuisances efficiently, please contact the Department's Pollution Hotline on 1300 130 372 immediately upon detecting unusual dust nuisance.

In addition, it would assist the department's enquiries if you could keep a diary recording the date, time, wind direction, the description of the dust (e.g. colour etc), a description of how the dust is affecting you or your property and a description of any activities which are visible on the site which you believe may be causing the dust.

I hope that this information will provide some comfort to the Yatala Residents Alliance community members. If you have any additional enquiries regarding the ongoing dust management, please contact Stacey Marshall on 07 5626 6871.

Yours sincerely,

sch4p4(6) Personal information

**Subject:** High dust deposition result - DSITI monitoring equipment Vennor Drive

**Attachments:** 339.120.031 - EMON Dust\_160321 mgm2day R2.pdf; 339.120.032 - EMON Dust\_160422 mgm2day R2.pdf; ecotrack CRs.pdf;

Re: Holcim Beeleigh Quarry - dust deposition exceedance; windrose for the period (08032016 – 07042016).png; Yatala\_monitoring\_Sep15-Aug16.xlsx

Good morning Brett,

Just wanting to flag an issue that may come under community scrutiny upon the release of the silica dust investigation next year.

As previously discussed with Yvette and yourself, the temporary DSITI monitoring station located at Vennor Dive, Ormeau, received an abnormally high dust deposition result for the March 2016 monitoring period (08/03/2016 – 07/04/2016). The insoluble solids were 287mg/m<sup>2</sup>/day and the ash content was **267mg/m<sup>2</sup>/day**. This concentration is well in excess of the 120mg/m<sup>2</sup>/day limit stipulated in condition B2 of EPPR00575213.

## YATALA QUARRIES DUST MONITORING INVESTIGATION - DEPOSITED DUST

Guideline: 120 mg/m<sup>2</sup>/day

| Sampling month | Sampling dates        | Vennor Dr, Ormeau                            |                                 |                                                |
|----------------|-----------------------|----------------------------------------------|---------------------------------|------------------------------------------------|
|                |                       | Average deposition rate                      |                                 |                                                |
|                |                       | Insoluble solids<br>(mg/m <sup>2</sup> /day) | Ash<br>(mg/m <sup>2</sup> /day) | Combustible matter<br>(mg/m <sup>2</sup> /day) |
| Sep 2015       | 2/9/2015 - 1/10/2015* | 58                                           | 33                              | 25                                             |
| Oct 2015       | 1/10/2015 - 2/11/2015 | 75                                           | 21                              | 54                                             |
| Nov 2015       | 2/11/2015 - 2/12/2015 | 49                                           | 19                              | 30                                             |
| Dec 2015       | 2/12/2015 - 5/1/2016  | 41                                           | 22                              | 20                                             |
| Jan 2016       | 5/1/2016 - 4/2/2016   | 28                                           | 21                              | 7                                              |
| Feb 2016       | 4/2/2016 - 8/3/2016   | 38                                           | 22                              | 16                                             |
| Mar 2016       | 8/3/2016 - 7/4/2016   | <b>287</b>                                   | <b>267</b>                      | 21                                             |
| Apr 2016       | 7/4/2016 - 6/5/2016   | 6                                            | 4                               | 2                                              |
| May 2016       | 6/5/2016 - 3/6/2016   | 29                                           | 17                              | 12                                             |
| Jun 2016       | 3/6/2016 - 5/7/2016   | 34                                           | 18                              | 16                                             |

Condition B1 of the EA states that dust that may cause a nuisance must not be released beyond the boundary etc. Condition B2 sets out the dust deposition limits (120 mg/m<sup>2</sup>/day). Condition B3 states that B2 (dust deposition limits) applies if a complaint is made about dust nuisance.

Based on my review of departmental records, the department did not receive a complaint for the monitoring period (8/03/16 – 7/04/16), nor in the month preceding this period. On 18, 23 and 28 April 2016 (well outside the monitoring period) several CRs were lodged by 4( 6) Personal info in regards to crystalline silica dust from all 4 quarries in the area and earthworks from the development nearby (i.e. not specifically about Holcim dust nuisance on any given day). On 3 May 2016 – CR lodged by 4( 6) Personal info specifically for Holcim Beenleigh (well outside the monitoring period with the high dust deposition result).

I queried Holcim whether they had received any complaints of dust nuisance for the period in question, as well as prior and following to the period and they have reported that no complaints were received. Their dust monitoring results for onsite indicators and sensitive receptors between 19 February 2016 to 22 April 2016 (2 months) show no exceedance of the 120mg/m<sup>2</sup>/day limit.

Further, the wind rose generated for the onsite weather station shows very minimal westerly or north westerly winds for the monitoring period (08/03/2016 – 07/04/2016). The Vennor Drive monitoring location is located west of the quarry.

As such, it is possible that the result is some form of abnormality (especially when viewed in comparison to the other results. Further, given the lack of complaints lodged with the department or the operator for this period (or immediately prior / following), the department have little grounds to enforce the 120/m<sup>2</sup>/day limit stipulated in Condition B2 of the EA.

Please advise me if you wish the matter to be investigated further.

Kind regards,

Zoe

\* Dust deposition sampling at Vennor Drive commenced on 8/9/2015

Note: Sum of ash and combustible matter deposition may not equal insoluble solids deposition due to rounding
